CAN YOU REMOVE HERNIA MESH?

In certain conditions where there is mesh infection or an undesirable mesh complication, hernia mesh can be removed.

Mesh can be removed surgically, either through open abdominal surgery or laparoscopic/robotic surgery.

Even if a mesh is recalled, it does not necessarily have to be removed. The majority of mesh used is flat sheets of polypropylene that have been used safely for decades.

To lessen the risk of hernia recurrence, hernia surgeons use suitably-selected, FDA-approved mesh reinforcement for the great majority of inguinal and ventral hernias. Dr. Iskandar will have a detailed discussion with you to hear any questions and concerns you may have. This will include talking about the benefits, drawbacks, and hazards of mesh-based procedures. The Iskandar Complex Hernia Center continues to evaluate new data on mesh materials in order to help select the safest and most appropriate mesh options for our patients.

WHAT ARE HERNIA MESHES MADE OF?

Hernia mesh is made from a variety of materials, and these could be synthetic (made in a lab) or biologic (modified animal tissue). Some meshes are permanent and do not dissolve, and some are absorbable. Mesh selection depends on several criteria such as the location of their hernia, size, risk of infection.

Company Description

The Iskandar Complex Hernia Center offers complex hernia surgery and advanced abdominal procedures with unparalleled compassion and renowned expertise, so you can enjoy a dramatically improved quality of life.

Contact Details

The Iskandar Complex Hernia Center
2360 N. I-35E Service Rd Suite 310-B
Waxahachie, TX 75165
(469) 800-9832
