

Read the directions carefully, and complete the tasks below.

1. Go to replit.com and create a new Python repl, name the replit **loop practice**.
2. Use the AI assistance feature to help you create a for loop and a while loop that we haven't discussed or completed on a worksheet.
3. After creating the code, run it to see the output.
4. **Paste the link to your code here:**

5. Paste the code and output of the for loop and while loop here:

6. Write a brief description of how **each piece** of code works. Include explanations of the loop structure, what it does, and how it achieves its purpose.

For loop description:

While loop description:

7. On a scale of 1 to 10, how would you rate your understanding of loops?

1-I do not understand it very well to **10-I understand it very well**, I could take a quiz over creating and tracing (figuring out the output, and do well on it).
