

Definition of Done

1. Software development user story
 - Unit test passed
 - Code reviewed
 - Acceptance criteria for each issue met
2. Website change without coding, e.g. styling web pages
 - The website is responsive.
 - The style aligns with the brand guideline.
 - It has to pass the Lighthouse effect.
3. An A/B experiment to test a hypothesis for improving a feature
 - Fairly compare the old feature and the new one.
 - Make sure enough people included in the experiment.
 - Check the decision carefully.
4. Project report and proposal presentation to report on recent progress and request further funding
 - Showcase the significant milestones and achievements reached since the last update.
 - Begin by clearly defining the plan for how funds will be used.
 - Evaluate the progress made and how previous funding was utilized.

5. Technical analysis of a problematic scenario before deciding how to solve it

- Evaluate the impact of the technical issue on system functionality
- Clearly identify the key factors contributing to the problem
- Take into account any constraints that may affect the solution implementation.
