CompassCom Releases New Features and Pricing Program to Benefit Winter Operations

DENVER, CO – September 29, 2021 –CompassCom is pleased to announce the release of version 7.9 of CompassTrac® fleet and asset tracking and management solution.

The features within this new release bring more detailed spreader controller information and provide further insight through enhanced dashboard and reporting functions.

More specifically the features include:

Integration of Force America, Bosh Rex Roth, and Certified Power Solutions Spreader Controllers for granular, pre-wet and liquid materials – total and application rate for all material types.

Snow fighting dashboard consolidates a series of key performance indicators that put key information in the hands of snow fighting personnel.

Snow Materials Report that delivers historical reporting of Granular, Pre-Wet and Direct liquid material application rates and totals, including Air and Road temperature (where available).

In conjunction with the release of this new version, is the launch of “Vortex”, a new pricing program aimed at simplify the purchasing process. The program packages together all the necessary components – hardware, software, connectors, and installation, into a bundled solution for the customer. The program is available in Standard, Lite and Pro levels to accommodate the varying customer needs.

“In preparation for this year’s snow season, we’re excited to be delivering additional functionality to provide increased value to our customers.” says Mike Gyde, Chief Revenue Officer. “Not only do we want to enhance our customer’s experience by providing a rich feature set for winter operations, but we also wanted to make the procurement of our solutions easier and hence, our new Vortex pricing program.”

CompassCom provides fleet management solutions that integrate GNSS, GIS and wireless networks enabling end users to view real-time locations and status of vehicles, people, and other high-value assets for full situational awareness. CompassTrac displays asset location, speeds, heading, IoT sensors and status integrated with ArcGIS map backgrounds in office or by the mobile worker on laptops, tablets, or smartphones. Agencies can configure CompassTrac on-premises or CompassWorks® Cloud based product to leverage Esri ArcGIS to meet the individual user’s workflow when they log into the system.

CompassCom will be exhibiting at the APWA Western Snow & Ice Conference in Loveland, CO, September 29-30, 2021. Stop by booth 146 to view demonstrations of CompassTrac V7 and let us show you how you can enhance safety, efficient, accountability, and sustainability for your winter maintenance and public works operations.

About CompassCom Since 1994 CompassCom has delivered accurate location data you can trust to empower results, leveraging the power of Esri ArcGIS. More than just vehicles on a map, CompassCom delivers real-time data to enhance command and control, based on an ArcGIS common operational picture. Providing our platform internationally to governments, public safety, defense, public works, DOTs, utilities, energy, and other organizations that want an off-the-shelf solution that has the flexibility to be tailored to support their mission. Our users experience measurable ROI for improved safety, efficiency, accountability, and sustainability to enable continuous improvement to support operational excellence.
