The fundamental challenge faced by schools today is designing a curriculum that prepares students for a future that is unseen, uncertain and complex.

The school has engaged Edimpact's Transdisciplinary Learning to enhance our Applied Learning Programme curriculum so that the programme not only explores STEM concepts and problems, but enables students to connect new knowledge and deepen understanding to real life experiences.

The result is greater focus in the programme as learning activities are more intentionally designed for greater impact and developing skills with transferability to other contexts.
