

### **Robotics Club (3rd, 4th and 5th grades)**

Join our exciting After-School Robotics Club, where 3rd, 4th, and 5th graders can unleash their creativity and technical skills by building, programming, and operating robots! Using a variety of hands-on tools like Lego Robotics kits, Osmo Robots, and Makey Makey kits, students will learn the fundamentals of robotics and coding through fun, interactive projects. They'll collaborate with classmates to design their own robots, program them to complete tasks, and even explore how to create interactive inventions. With each session, kids will develop problem-solving skills, boost their confidence, and ignite their passion for technology. By the end of the program, they'll showcase their robotic creations, inspiring fellow students and fostering a love for STEM!
