

Act on Climate Now: Support the Clean Energy Jobs and Pipeline and Water Protection Acts

To: [Your Legislator] Address: [##] House Office Building, 6 Bladen Street, Annapolis, MD 21401

International and federal reports have confirmed: we no longer have time to wait. We must act on climate now. This session, Maryland can lead the nation by passing two urgent bills that will strengthen our green energy, and protect our citizens from dangerous pipelines.

The first is the “Clean Energy Jobs Act,” which would double the state’s renewable electricity requirement to 50% by 2030, then require a plan to reach 100% clean power by 2040. By increasing demand for wind and solar, it will create 20,000 Maryland jobs.

The second is the “Pipeline and Water Protection Act,” which would require the Maryland Department of the Environment (MDE) to fully consider the impacts a proposed pipeline will have on water quality and climate. MDE has the authority to carry out this comprehensive review under the federal Clean Water Act, yet the agency refused to exercise it during the two years that activists fought the Potomac Pipeline. This bill would make sure MDE never waives this authority again.

I urge you to support both of these bills by voting for them whenever they come before you
