Example: ES is the Sender, FR is the Receiver

---PREVIOUS DOCUMENT				G0007 G0614	Sender / Mandatory: ES checks the common rules & conditions Receiver / Strongly Recommended: FR checks the common rules & conditions This occurrence of the DG doesn't have any CC qualifier => Sender shall validate only common R/C/CL's must be validated
Sequence number = 1	R	n..5		R0987	
Type	R	an4	CL214	G0918	
CC qualifier = empty	D	a2	CL010	R0906 G0921 C0917	
Reference number	R	an..70		G0021	
---PREVIOUS DOCUMENT				G0007 G0614	Sender / Mandatory: ES checks the common rules & conditions Sender / Mandatory: ES checks the national rules & conditions Receiver / Strongly Recommended: FR checks the common rules & conditions This occurrence of the DG has the Sender CC qualifier => Sender shall validate BOTH common AND national R/C/CL's.
Sequence number = 2	R	n..5		R0987	
Type	R	an4	CL214	G0918	
CC qualifier = ES	D	a2	CL010	R0906 G0921 C0917	
Reference number	R	an..70		G0021	
---PREVIOUS DOCUMENT				G0007 G0614	Sender / Mandatory: ES checks the common rules & conditions Receiver / Strongly Recommended: FR checks the common rules & conditions Receiver / Mandatory: FR checks the national rules & conditions This occurrence of the DG has the Receiver CC qualifier => Sender shall validate common R/C/CL's; Receiver shall validate national R/C/CL's; Receiver can also validate the common R/C/CL's if it decides so.
Sequence number = 3	R	n..5		R0987	
Type	R	an4	CL214	G0918	
CC qualifier = FR	D	a2	CL010	R0906 G0921 C0917	
Reference number	R	an..70		G0021	

- It can be left empty which means that the SCI will validate the common rules.
- the country code of the SCI can be mentioned, which means SCI will validate common and national rules.
- the country code of the PCI can be mentioned, which means PCI will validate national rules.
