## May 1, 11am-1:00pm Eastern: Comparing DIA with a deep fractionation library versus a refined subset in Skyline

**Speaker**
Brendan MacLean
*Ideally participants had at least attended the April 30 webinar presented by Brendan and completed the assigned written tutorial. Attending Brian Searle's and Ruedi Aebersold's lectures on DIA would have been ideal.*
*This webinar also covered using batch scripting to run a 3.5 hour multiple stage, multiple Skyline document data analysis with the Skyline command line interface. Ideal preparation would include some knowledge of scripting languages.*
*Due to the amount of new material presented in this session, it was not possible to fully prepare the companion web page for the presentation before the webinar went live. That page can now be found here:*
