Abstract

Abstracts for research articles should provide a concise yet comprehensive overview of the study in a single paragraph not exceeding 200 words. Authors are encouraged to adopt a structured format without using explicit subheadings. The content should sequentially address: (1) Background, to contextualize the research and its significance; (2) Purpose, to define the study's specific objectives; (3) Methods, to briefly explain the methodology or theoretical framework; (4) Results, to summarize the primary findings; and (5) Conclusions, to present the final interpretations and implications of the work

Keywords: *Keyword 1, Keyword 2, Keyword 3*

1. INTRODUCTION [Garamond 13 bold]

The introduction should establish a broad context for the research, emphasizing its significance and primary objectives. Authors must provide a thorough review of the current state of the field, citing essential publications and addressing any conflicting hypotheses or theories. The section should conclude with a brief statement of the study's main aim and principal findings. To ensure readability, the content should be accessible to scientists across various disciplines. All technical terms, symbols, and abbreviations must be defined upon their first mention. Citations must follow the specific (Author, Year) format provided, and all figures and tables should be referenced in sequential numerical order

2. METHODS [Garamond 13 bold]

The research method should be included in the Introduction. The method contains an explanation of the research approach, subjects of the study, the conduct of the research procedure, the use of materials and instruments, data collection, and analysis techniques.

3. FINDINGS AND DISCUSSION [Garamond 13 bold]

The results obtained from the research have to be supported by sufficient data. The research results and the discovery must be the answers, or the research hypothesis stated previously in the introduction part.

3.1. Subsection

Heading 1: use this style for level one heading

Heading 2: use this style for level two heading

Heading 3: use this style for level three heading

Heading 4: create the heading in italics.

Bulleted lists look like this:

- First bullet
- Second bullet
- Third bullet

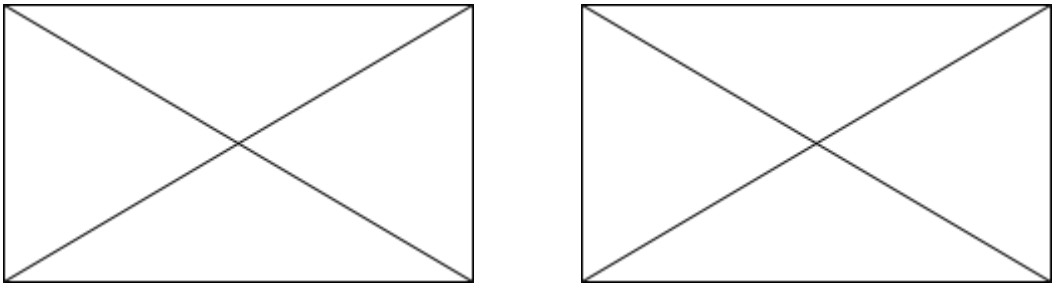

Numbered lists can be added as follows:

1. First item
2. Second item
3. Third item

The text continues here.

3.2. Figures, Tables and Schemes

All figures and tables should be cited in the main text as Figure 1, Table 1, etc.

(a) (b)

Figure 1. This is a figure, Schemes follow the same formatting. If there are multiple panels, they should be listed as: (a) Description of what is contained in the first panel; (b) Description of what is contained in the second panel. Figures should be placed in the main text near to the first time they are cited. A caption on a single line should be centered.

Table 1. This is a table. Tables should be placed in the main text near to the first time they are cited.

Title 1	Title 2	Title 3
Entry 1	Data 1	Data 1
Entry 2	Data 2	Data 2

1Tables may have a footer

3.3. Formating of Mathematical Components (if any)

This is an example of an equation:

The text following an equation need not be a new paragraph. Please punctuate equations regular text.

Theorem-type environments (including propositions, lemmas, corollaries etc.) can be formatted as follows:

> Example text of a Quote. Quote quote. quote The text continues here. Proofs must be formatted as follows: quote quote quote quote quote quote quote quote quote quote quote quote quote,
>
> The text continues here

Discussion: the discussion is highlighted through the title and subtitles of the section when needed

Authors should discuss the results and how they can be interpreted from the perspective of previous studies and of the working hypotheses. The findings and their implications should be discussed in the broadest context possible. Future research directions may also be highlighted. The following components should be covered in the discussion: How do your results relate to the original question or objectives outlined in the Introduction section (what/how)? Do you provide interpretation scientifically for each of your results or findings presented (why)? Are your results consistent with what other investigators have reported (what else)? Or are there any differences?

4. CONCLUSION [Garamond, 13 bold]

The conclusion should answer the objectives of the research and research discoveries. The concluding remark should not contain only the repetition of the results and discussions or abstract. You should also suggest future research and point out those that are underway.

REFERENCES

The literature listed in the References contains only the sources referenced or included in the article.

We recommend preparing the references with a bibliography software package, such as Mendeley, EndNote, Reference Manager or Zotero to avoid typing mistakes and duplicated references. Referral sources should provide 80% of journal articles, proceedings, or research results from the last five years. Writing techniques bibliography, using the system cites APA (American Psychological Association) Style and the 6th edition.
