PART 2 - Questions 8-15

Read the passage and answer questions 8-15.

Fifty-two-year-old American Henry Evans is one of the world's first teletourists. From the comfort of his bed in Palo Alto, California, he has travelled to places as far away as Bora Bora in the South Pacific. Under normal circumstances, this journey would be impossible for Henry because he is disabled. A serious stroke when he was 40 affected his brain and left him without speech and unable to use his arms or legs. But with the help of technology, Henry is able to deal with his difficulties and get out to see the world.

When Henry wants to visit a museum, he uses a telepresence robot called the Beam, a big computer monitor with a webcam that is attached to a mobile base with two poles. Using head movements, he can drive the machine around the halls, talking to the guide and learning about the exhibits, just like any other visitor. Several of the world's museums already use these machines, and Henry hopes there will soon be more.

[A] To see what is happening outside, Henry uses a device called Polly. Like the Beam, Polly is <u>made up</u> of a monitor and a webcam, the difference being that it is small enough to be portable. The gadget fits into a frame attached to a person's shoulder allowing <u>it</u> to be carried around

like a parrot. By virtue of this new technology, Henry can accompany and converse with his friends and family when they have a day out in the country. He controls it by moving his head, so that it turns around and shows him everything his companions can see and hear.

[B] Thanks to improvements in long-distance remote-control software, Henry can fly drones, which also enable him to explore from the air. [C] When he wants to go further afield, he has found a website which has 5,000 drone videos from all over the world, which gives him access to all kinds of fascinating destinations. [D]

No journey is too far for Henry, who is currently pursuing the possibility of travelling into space. He got the idea from an article he came across on the internet. He read that a research team was trying to get access for PC users to a robot on the International Space Station (ISS). Henry has already applied for permission to use this new technology, but he has not received approval yet. Judging by what he has already achieved, however, it is only a matter of time before he is allowed to go on a remote tour of the satellite.

For questions 8 and 9, decide if the statements are TRUE or FALSE. Write X in the corresponding column (T or F) to the right of each statement.
