Once the download is complete, open the folder and double-click the 9780789755179_netplussim_winmac.zip file to extract its contents, then follow the steps below.

PC users

1. Double-click the Start file to launch the media page which provides links to support information and to other products. Depending on how your system is configured, you may see an ".exe" extension after the Start filename.
2. Select the option to install the application on the media page.
3. Follow the prompts to complete the installation (accept all default prompts).
4. Enter your Pearson account credentials to launch the software for the first time.
5. Before using the simulator, an access code that is tied to your Pearson account (created when the simulator was purchased) is required. Log into your [Pearson account](#) to copy your access code.

Mac users

1. Double-click on the "fscommand" folder.
2. Double-click on the "install" file to start the installation process.
3. Follow the prompts to complete the installation (accept all default prompts).
4. Enter your Pearson account credentials to launch the software for the first time.
5. Before using the simulator, an access code that is tied to your Pearson account (created when the simulator was purchased) is required. Log into your [Pearson account](#) to copy your access code.

Note: Trying to install the software by launching any other file may result in bypassing the access code verification steps, which will prevent the software from functioning. This is step is required to use the simulator. Please log into your Pearson Account to view your access code.
