

Science writing 8 G8

Long ago, the lifestyles of many people changed; especially families living by the sea were affected. Specifically, there was a family that had two children and owned large lands in which they lived and had their own business. But because of the constant rainfall and the strong waves of cold and heat that came suddenly and to everyone's surprise, their crops were damaged and thus suffered financial losses. In addition the town lost one of its main sources of food.

On the other hand, one of the children of the family was in very poor health, and due to the situation, they could not afford to pay for his treatment. Not to mention that natural disasters advanced rapidly and in less than a week almost the entire town was affected, either with floods or landslides.

Joseph, the father of the family, and 60-year-old retiree and former NASA engineer, decided to fight those supernatural phenomena that tormented them and find a solution. After so much thinking, he realized that the answer to all his problems was above his head in the infinity of space, but he couldn't do it alone, so he convinced the people to help him with his project, and as they were desperate, they had no choice but to accept the proposal.
