

Lesson 9 - Measuring Energy - Productivity

Purpose - Use a sample to determine the energy available in a system.

Need grass samples from the field if we do this. Rye from class did not easily burn.

1. Warm up - Experiment/Demo - [Measuring Biomass and Energy](#) (open and skim - in Google Classroom)
2. Finished Early - [Trophic Pyramids in an Aquatic System](#) (read carefully) (1)
 - a. The goal of this simulation is to give you a practical example of why some trophic pyramids look different and why.

Homework - Read 2.4 - Complete reading notes to be graded during the before final exam in a few weeks.
