We invite abstract submissions from PhD candidates actively working on topics related to the Triple Planetary Crisis and its intersections with water resources management, environmental engineering, climate science, ecological restoration, policy development, technologies development and other relevant disciplines. The symposium aims to encourage collaborative discussions and knowledge exchange, as well as to explore potential pathways towards achieving sustainable solutions. Abstracts should be written in English and not exceed 300 words. Please provide a clear title, list of authors, affiliations, and contact information. Abstracts must include the motivation, research objective, methodology, key findings, and implications for addressing the Triple Planetary Crisis. Selected participants will be invited to present their research during the PhD Symposium, where they will have the opportunity to engage with experts, academics, and fellow researchers working on similar challenges. We look forward to your contributions in advancing the discourse on the Triple Planetary Crisis.
