

FOR IMMEDIATE RELEASE

Sharp Steps Beyond CMYK on Taktisphere Live! September 17

Live unboxing, real-world BP-1200S applications from YellowDog, and an early look at Sharp's plans for PRINTING United Expo 2026

MELBOURNE, Fla., September 14, 2026 – Taktisphere Live! will welcome Sharp's Dino Pagliarello and YellowDog's Dan Mulligan for a special live event on Thursday, September 17, at 1:00 p.m. Eastern.

Pagliarello will join Taktiful founder Kevin Abergel for a live unboxing featuring printed work from YellowDog and a deeper look at what Sharp's fifth- and sixth-color capabilities can actually produce.

The conversation will move beyond specifications and into the applications, creative possibilities, and new revenue opportunities available when printers push beyond traditional CMYK.

Dan Mulligan of YellowDog will share the printer's perspective. YellowDog operates a Sharp BP-1200S, and Mulligan will walk viewers through some of the standout work his team is producing with the press.

"We want to show people the real stuff," said Abergel. "Dino can explain what the technology makes possible, and Dan can show us what happens when a printer puts it to work. That is where the conversation gets interesting."

The session will also offer an early preview of what attendees can expect from Sharp at PRINTING United Expo 2026 in Las Vegas.

Sharp will tease some of the technology, applications, and experiences planned for the show while saving a few surprises for the booth.

The event is designed for printers, production leaders, designers, and sales teams looking for practical ways to turn additional colors into applications customers will notice and pay for.
