

Fifth Grade Instructional Support Document

Ready Units, Lessons, & Support Tools	Grade 5 Standards Assessed	Blueprint Percentage
Quarter 1		
1 Unit Lesson 1 Understand Volume *Combine with Lesson 2 (Volume with Unit Cubes)	5.MD.C.3.a Recognize volume as an attribute of solid figures and understand concepts of volume measurement. a. Understand that a cube with side length 1 unit, called a "unit cube," is said to have "one cubic unit" of volume and can be used to measure volume.	27-34%
1 Unit 1 Lesson 1 Understand Volume *Combine with Lesson 2 (Volume with Unit Cubes)	5.MD.C.3.b Recognize volume as an attribute of solid figures and understand concepts of volume measurement. b. Understand that a solid figure which can be packed without gaps or overlaps using n unit cubes is said to have a volume of n cubic units.	27-34%
Unit 1 Lesson 2 Find Volume Using Unit Cubes	5.MD.C.4 Measure volume by counting unit cubes, using cubic centimeters, cubic inches, cubic feet, and improvised units.	27-34%
Unit 1 Lesson 2 Find Volume Using Unit Cubes Lesson 3 Find Volume using Formula	5.MD.C.5.a Relate volume to the operations of multiplication and addition and solve real-world and mathematical problems involving volume of right rectangular prisms. a. Find the volume of a right rectangular prism with whole-number side lengths by packing it with unit cubes and show that the volume is the same as would be found by multiplying the edge lengths, equivalently by multiplying the	27-34%

	height by the area of the base. Represent whole-number products of three factors as volumes (e.g., to represent the associative property of multiplication).	
Unit 1 Lesson 3 Find Volume using Formula	5.MD.C.5.b Relate volume to the operations of multiplication and addition and solve real-world and mathematical problems involving volume of right rectangular prisms. b. Know and apply the formulas $V = l \times w \times h$ and $V = B \times h$ (where B represents the area of the base) for rectangular prisms to find volumes of right rectangular prisms with whole number edge lengths in the context of solving real-world and mathematical problems.	27-34%
Unit 1 Lesson 3 Find Volume using Formula	5.MD.C.5.c Relate volume to the operations of multiplication and addition and solve real-world and mathematical problems involving volume of right rectangular prisms. c. Recognize volume as additive. Find volumes of solid figures composed of two non-overlapping right rectangular prisms by adding the volumes of the non-overlapping parts, applying this technique to solve real-world problems.	27-34%
Unit 1 Lesson 4 Multiply Multi digit Number	5.NBT.B.5 Fluently multiply multi-digit whole numbers (up to three-digit by four-digit factors) using appropriate strategies and algorithms.	18-20%
Unit 1 Lesson 5 Divide multi digit numbers End of Unit 1	5.NBT.B.6 Find whole-number quotients and remainders of whole numbers with up to four-digit dividends and two-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.	18-20%

Quarter 2		
Start of Unit 2 Lesson 6 Understanding Decimal Place Value	5.NBT.A.1 Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and 1/10 of what it represents in the place to its left.	16-18%
Unit 2 Lesson 7 Understanding the Power of 10	5.NBT.A.2 Explain patterns in the number of zeros of the product when multiplying a number by powers of 10 and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. Use whole-number exponents to denote powers of 10.	16-18%
Unit 2 Lesson 8 Read Write Decimals Lesson 9 Compare and Round Decimals	5.NBT.A.3 Read and write decimals to thousandths using standard form, word form, and expanded form (e.g., the expanded form of 347.392 is written as $3 \times 100 + 4 \times 10 + 7 \times 1 + 3 \times (1/10) + 9 \times (1/100) + 2 \times (1/1000)$). Compare two decimals to thousandths based on meanings of the digits in each place and use the symbols $>$, $=$, and $<$ to show the relationship.	16-18%
Unit 2 Lesson 9 Compare and Round Decimals	5.NBT.A.4 Round decimals to the nearest hundredth, tenth, or whole number using understanding of place value.	16-18%
Unit 2 Lesson 12 Adding Fractions Lesson 13 Subtracting Fractions	5.NF.A.1 Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like denominators. For example, $\frac{2}{3} + \frac{5}{4} = \frac{8}{12} + \frac{15}{12} = \frac{23}{12}$. In general $\frac{a}{b} + \frac{c}{d} = \frac{(ad+bc)}{bd}$.	24-31%

Unit 2 Lesson 12 Adding Fractions Lesson 13 Subtracting Fractions Lesson 14 Add/Subtract real world problems	5.NF.A.2 Solve contextual problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. <i>For example, recognize an incorrect result $\frac{2}{5} + \frac{1}{2} = \frac{3}{7}$, by observing that $\frac{3}{7} < \frac{1}{2}$.</i>	24-31%
Unit 2 Lesson 10 Adding Decimals Lesson 11 Subtracting Decimals Lesson 14 Adding and Subtract word problems End of Unit 2 Start Unit 3 Lesson 15 Multiplying a decimal by a whole Lesson 16 Multiplying Decimals Lesson 17 Dividing Decimals	5.NBT.B.7 Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between operations; assess the reasonableness of answers using estimation strategies. (Limit division problems so that either the dividend or the divisor is a whole number.)	18-20%
Quarter 3		
Unit 3 Lesson 18 Fractions as Division	5.NF.B.3 Interpret a fraction as division of the numerator by the denominator ($\frac{a}{b} = a \div b$). <i>For example, $\frac{3}{4} = 3 \div 4$ so when 3 wholes are shared equally among 4 people, each person has a share of size $\frac{3}{4}$.</i> Solve contextual problems involving division of whole numbers leading to answers in the form of fractions or mixed numbers by using visual fraction models or equations to	24-31%

	represent the problem. <i>For example, if 8 people want to share 49 sheets of construction paper equally, how many sheets will each person receive? Between what two whole numbers does your answer lie?</i>	
Unit 3 Lesson 19 Understanding Multiplication by a Fraction	5.NF.B.4.a Apply and extend previous understandings of multiplication to multiply a fraction by a whole number or a fraction by a fraction. a. Interpret the product $\frac{a}{b} \times q$ as $a \times (q \div b)$ (partition the quantity q into b equal parts and then multiply by a). Interpret the product $\frac{a}{b} \times q$ as $(a \times q) \div b$ (multiply a times the quantity q and then partition the product into b equal parts). <i>For example, use a visual fraction model or write a story context to show that $\frac{2}{3} \times 6$ can be interpreted as $2 \times (6 \div 3)$ or $(2 \times 6) \div 3$. Do the same with $\frac{2}{3} \times \frac{4}{5} = \frac{8}{15}$. (In general, $\frac{a}{b} \times \frac{c}{d} = \frac{ac}{bd}$.)</i>	24-31%
Unit 3 Lesson 19 Understanding Multiplication by a Fraction Lesson 20 Multiplying Fractions to Find Area Lesson 22 Multiplying Fractions in Word Problems	5.NF.B.4.b Apply and extend previous understandings of multiplication to multiply a fraction by a whole number or a fraction by a fraction. b. Find the area of a rectangle with fractional side lengths by tiling it with unit squares of the appropriate unit fraction side lengths and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles and represent fraction products as rectangular areas.	24-31%
Unit 3 Lesson 21 Understanding Multiplication as Scaling	5.NF.B.5.a Interpret multiplication as scaling (resizing). a. Compare the size of a product to the size of one factor on the basis of the size of the other factor, without performing the indicated multiplication. <i>For example, know if the product will be greater than, less than, or equal to the factors.</i>	24-31%

Unit 3 Lesson 21 Understanding Multiplication as Scaling	5.NF.B.5.b Interpret multiplication as scaling (resizing). b. Explain why multiplying a given number by a fraction greater than 1 results in a product greater than the given number (recognizing multiplication by whole numbers greater than 1 as a familiar case); explain why multiplying a given number by a fraction less than 1 results in a product less than the given number; and relate the principle of fraction equivalence $\left(\frac{a}{b}\right) = \frac{(a \times n)}{(b \times n)}$ to the effect of multiplying $\frac{a}{b}$ by 1.	24-31%
Unit 3 Lesson 22: Multiplying Fractions in Word Problems Additional: Lesson 20 Lesson 26 Lesson 27	5.NF.B.6 Solve real-world problems involving multiplication of fractions and mixed numbers by using visual fraction models or equations to represent the problem.	24-31%
Unit 3 Lesson 23 Understanding Division with Unit Fractions *Can combine with Lesson 24	5.NF.B.7.a Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions. a. Interpret division of a unit fraction by a non-zero whole number and compute such quotients. <i>For example, use visual models and the relationship between multiplication and division to explain that $\left(\frac{1}{3}\right) \div 4 = \frac{1}{12}$ because $\left(\frac{1}{12}\right) \times 4 = \frac{1}{3}$.</i>	24-31%
Unit 3 Lesson 23 Understanding Division with Unit Fractions	5.NF.B.7.b Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions. b. Interpret division of a whole number by a unit fraction and	24-31%

*Can combine with Lesson 24	compute such quotients. <i>For example, use visual models and the relationship between multiplication and division to explain that $4 \div \left(\frac{1}{5}\right) = 20$ because $20 \times \left(\frac{1}{5}\right) = 4$.</i>	
Unit 3 Lesson 24 Divide Unit Fractions in Word Problems End of Unit 3	5.NF.B.7.c Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions. c. Solve real-world problems involving division of unit fractions by non-zero whole numbers and division of whole numbers by unit fractions by using visual fraction models and equations to represent the problem. <i>For example, how much chocolate will each person get if 3 people share $\frac{1}{2}$ lb of chocolate equally? How many $\frac{1}{3}$ cup servings are in 2 cups of raisins?</i>	24-31%
Quarter 4		
Start of Unit 4 Lesson 25 Converting Measurements Lesson 26 Solving Word Problems Involving Conversion	5.MD.A.1 Convert customary and metric measurement units within a single system by expressing measurements of a larger unit in terms of a smaller unit. Use these conversions to solve multi-step real-world problems involving distances, intervals of time, liquid volumes, masses of objects, and money (including problems involving simple fractions or decimals). <i>For example, 3.6 liters and 4.1 liters can be combined as 7.7 liters or 7700 milliliters.</i>	27-34%
Unit 4 Lesson 27 Make Line Plots and Interpret Data	5.MD.B.2 Make a line plot to display a data set of measurements in fractions of a unit ($\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$). Use operations on fractions for this grade to solve problems involving information presented in line plots. <i>For example, given different measurements of liquid in identical beakers, find the amount of liquid each beaker would contain if the total amount in all the beakers were redistributed equally.</i>	27-34%
Unit 4	5.G.B.3 Classify two-dimensional figures in a hierarchy based	27-34%

Lesson 28 Understanding 2D Figures Lesson 29 Classifying 2D Figures End of Unit 4	on properties. Understand that attributes belonging to a category of two-dimensional figures also belong to all subcategories of that category. <i>For example, all rectangles have four right angles and squares are rectangles, so all squares have four right angles.</i>	
Start of Unit 5 Unit 5 Lesson 30: Evaluate, Write and Interpret Expressions	5.OA.A.2 Write simple expressions that record calculations with numbers and interpret numerical expressions without evaluating them. For example express the calculation "add 8 and 7, then multiply by 2" as $2 \times (8 + 7)$. Recognize that $3 \times (18,932 + 921)$ is three times as large as $18,932 + 921$, without having to calculate the indicated sum or product	18-20%
Unit 5 Lesson 31 Understanding Coordinate Plane *Can combine with Lesson 32.	5.G.A.1 Graph ordered pairs and label points using the first quadrant of the coordinate plane. Understand in the ordered pair that the first number indicates the horizontal distance traveled along the x-axis from the origin and the second number indicates the vertical distance traveled along the y-axis, with the convention that the names of the two axes and the coordinates correspond (e.g., x-axis and x-coordinate, y-axis and y-coordinate).	27-34%
Unit 5 Lesson 32 Representing Problems on the Coordinate Plane	5.G.A.2 Represent real-world and mathematical problems by graphing points in the first quadrant of the coordinate plane and interpret coordinate values of points in the context of the situation.	27-34%
Unit 5 Lesson 33: Analyze Patterns and Relationships	5.OA.B.3.a Generate two numerical patterns using two given rules. For example, given the rule "Add 3" and the starting number 0, and given the rule "Add 6" and the starting number 0, generate terms in the resulting sequences. a. Identify relationships between corresponding terms in two numerical	16%-18%

	patterns. For example, observe that the terms in one sequence are twice the corresponding terms in the other sequence	
Unit 5 Lesson 33: Analyze Patterns and Relationships End of Unit 5	5.OA.B.3.b Generate two numerical patterns using two given rules. <i>For example, given the rule "Add 3" and the starting number 0, and given the rule "Add 6" and the starting number 0, generate terms in the resulting sequences.</i> b. Form ordered pairs consisting of corresponding terms from two numerical patterns and graph the ordered pairs on a coordinate plane.	16-18%
