ABSTRACT

Comprehensive guidelines for formatting your paper submitted to HEURISTIC are outlined below. You are responsible for ensuring the quality and visual presentation of your work. It is strongly advised that you directly overwrite the provided template with your content. Alternatively, you can copy and paste from another document while utilizing the provided markup styles. Please maintain consistency throughout the formatting process, refraining from altering page setup elements such as font, line spacing, margins, capitalization, and section arrangement. The abstract section is obligatory and should not exceed 250 words. This section should summarize the paper's objective, methodology, findings & conclusions, and implications. References should not be included in this section. For the Keywords section, please list words or phrases in alphabetical order. A maximum of 5 keywords is allowed. [Justify, Times New Roman 11, spacing 1].

INTRODUCTION [Center, Times New Roman 12, Bold]

In this section the author is asked to describe the background of the problem, objectives and benefits underlying the research, literature review and/or hypothesis. In this section, a review of previous literature is needed as a basis for researchers to explain: (1) the existence of research gaps; (2) the researcher's argument in fulfilling the gap, as a form of the researcher's commitment to contributing to the development of science; (3) the researcher's argument about the novelty of the research. [Justify, Times New Roman 12, spacing 1]. Articles are written in A4 and follow the provisions of top, right and bottom margins of 2.79 cm and left margins of 3.17 cm. **Plagiarism** must have a similarity rate detected by Turnitin of less than **20%**.

MATERIALS AND METHODS [Center, Times New Roman 12, Bold]

Contains an explanation of research variables, operational definitions of variables, research design, research subjects, data collection techniques and data analysis techniques. Literature reviews can be included in this section, but only the main ones. In this section, the author is asked to explain in as much detail as possible the research procedures used, making it easier for other researchers to replicate or verify the research. Avoid directly quoting definitions from the book in the method section. [Justify, Times New Roman 12, spacing 1]

RESULTS AND DISCUSSIONS [Center, Times New Roman 12, Bold]

Results

Contains the results of descriptive statistics, assumption tests and hypothesis tests, which are then analyzed critically. Use tables/graphs/images containing interpretations of data analysis results to make it easier for readers to understand the results of text research. It's best to place tables/graphs/images at the end of the manuscript, not inside. Examples of writing table and image titles are presented below. [Justify, Times New Roman 12, spacing 1]

Discussions

Explain the research results. The research results were analyzed critically, linked to previous research and relevant literature. The discussion section must contain substantial interpretation of the analysis results and comparison with previous research. This comparison must explain differences in research findings with previous research, so that it can contribute to the development of science. The literature used in the discussion must not exceed the last ten years. [Justify, Times New Roman 12, spacing 1]

CONCLUSION [Center, Times New Roman 12, Bold]

Conclusion contains conclusions and suggestions. Conclusions are made briefly, clearly and concisely, and must answer the objectives of the research. The conclusion contains a synthesis of findings from data analysis and discussion, and highlights new findings that contribute to the development of Industrial Engineering science. The conclusion is written in paragraph form. [Justify, Times New Roman 12, spacing 1]

ACKNOWLEDGMENT [Center, Times New Roman 12, Bold]

In the acknowledgment section of the paper, thank individuals, institutions, or sources of financial (including no. grant) support that made important contributions to

your research. Keep the acknowledgements brief, specific, and relevant to the research conducted.

REFERENCES [Center, Times New Roman 12, Bold]

The bibliography exclusively includes citations that serve as direct sources. The use of citations should consist of **80%** journal sources. When compiling the bibliography, it is recommended to use reference management tools such as Mendeley, EndNote, Zotero, or similar applications. Whenever possible, incorporate the digital object identifier (**DOI**) for each reference. Adherence to **IEEE referencing** style is expected for in-text citations and presentation of references in the reference list. **Each article is expected to include a minimum of 15 references.** [Justify, Times New Roman 12, spacing 1]
