

Leon is a bard of doom who failed to complete the quest he was destined to do on every occasion sburb has given him. This is all due to his early realization of his f a t e, a concept he gained after defeating a denizen in his first life. Out of fear of being forgotten, he would manipulate sburb's system to deny his own fate. Not destroying his future timeline, but destroying the fate that connects him to it. This was a big mistake however, as he was forced infinitely to e x i s t. By destroying his fate he removed his ending, and thus whenever a sburb session he was in ended. He would disappear, cease existence, in order to reappear in another with no recollection. Eventually, through specific requirements, denizen help, and stereotypical doom-bound sacrifice. He would do what he knew, destroy. Destroying all the adjacent leons among his multiversal grouping, destroying himself past his immortality. Were, really all the successful examples he had among the many, many attempts. Both coming with physical and mental cost, it would only be the thing they destroyed, fate, that would bring them to one plain. Where they would destroy eachother in order to *repair* something for once. However, you can't destroy something. That doesn't end. The first, the second, and the third leon to succeed in wiping fate would be centered into one single being. Which, left immediately to go back h o m e. He had failed so badly, that he had become an entity within sburb's code. Searching for 3 different universes to satisfy his unending confusion, the only factor he could pin all 3 of them having is doom. High concentration of it among them. Midnight city dissolved after the first leon used the mayor denizen's final imparting knowledge to crack fate, The Game of Chess being the host of a doom-based virus. Leon's quest never being finished in Circle D. All 3 successes led to all 3 holes. Leon would jump from universe to universe, timeline to timeline, following the best scent of doom he could get. But, being a fully failed bard of doom, meant the more he found in a universe. The weaker he was.
