SplitView — Privacy Policy

Last updated: 14 April 2026

SplitView is a Chrome browser extension that opens multiple websites side by side in separate windows. This privacy policy explains how the extension handles user data.

Data collection SplitView does not collect, store, or transmit any personal data to external servers.

Local storage The extension stores your configuration (selected URLs, layout preference, and window gap size) locally on your device using Chrome's built-in storage API. This data never leaves your browser.

Third-party services SplitView does not use analytics, tracking tools, or any third-party services.

Permissions The extension requests permissions solely to fulfil its core function: opening and positioning browser windows. No browsing history, personal information, or page content is accessed or recorded.

Contact If you have questions about this policy, you can reach the developer at camiloesc@gmail.com.
