We have our global curriculum, which the Trust is rightly very proud of. But we think we can make that curriculum even more exciting by using technology more effectively within that curriculum. So whether it's giving children and experiences that they wouldn't have normally had or giving children audiences that they wouldn't have had before, or allowing children to explain their understanding in new and engaging and interesting ways, we're still relatively early in the project, but what we're already seeing is it's creating a buzz. People are talking about how technology is now being used in the Inspire Partnership. People are taking note of what's happening.

Teachers are discussing the impact that it's had on their learning. There's the sharing of information about how this technology is being used in the classroom, how it's being applied, and it's paving the way for having real experiences, interesting experiences built into our curriculum going forward.
