

Are you considering having an in-ground pool installed in your backyard? After a lot of research, you will probably come to the same conclusion as many homeowners in your position, and that is that fiberglass pools are certainly one of the best options among the many choices you have for materials. There are many reasons why this is true, and here are just a few of the top points to consider:

#### Resurfacing is Rare, if Needed at All

The gel-coat of a fiberglass is likely to last for the life of the pool without needing to be resurfaced or replaced. Of course, there are rare exceptions, but most folks that do have to resurface their fiberglass pools usually do not have to do so until many years after their initial installation.

Conversely, vinyl liners must be replaced approximately every 5-9 years, while concrete pools must be resurfaced at least once per decade.

#### Smooth Surfaces are Safer

Gel-coat, as it is referred to, is a smooth, slip-resistant, non-porous surface. This means you are unlikely to scrape your feet or knees on it the way you would with rough concrete.

#### Quicker Installation Means Using your Pool Sooner

The entire structure of a fiberglass pool consists of a hard shell manufactured offsite. That means it comes to your home ready to be installed right away. It will be wrapped, along with everything needed for installation, and sent within a six week window. Compare this to concrete pool installation which can take up to six months, or vinyl pool installation that usually takes about two months on average.

#### Minimal Maintenance is Required

Because fiberglass pools have a non-porous gel-coat, they are resistant to the growth of algae, do not require acid washing, and never need to be patched or smoothed out as vinyl pools do. The liner also refrains from reacting with any chemicals used to sanitize pool water. That means less time scrubbing walls and balancing chemicals to get the pH just right.

#### Durability is Guaranteed

Fiberglass pools are known for their innate durability and strength. The surface and the structure of your fiberglass-lined pool enables it to last for generations. As a matter of fact, if you take proper care of your pool, it can survive up to 50 years.

In conclusion, there are many benefits to choosing fiberglass as your material of choice for your new in-ground pool. This list details many of these advantages, so you can now make the best and most informed decision when it comes to choosing the best liner material for your needs.
