Position Job Duties

Req# 530065_ Post Doctoral Fellow - Ecology of Boreal Forests

100% The duties of the position focus on data synthesis, including compiling data from the BNZ-LTER data archive as well as other data sources, developing a conceptual framework to guide the synthesis analytics, and conducting data analyses with modern analytic tools to address the synthesis questions. The Post Doctoral Researcher will work closely with other members of the BNZ-LTER team to develop synthesis questions and approaches.

The position allows for multiple professional development opportunities, including joining a team of investigators from multiple academic institutions focused on boreal forest ecology and long-term ecological research, working closely with experts in ecosystem ecology, biogeochemistry, disturbance ecology, and statistical analyses, and engaging with ongoing field investigations.

The Post Doctoral Researcher will be based at the University of Alaska Fairbanks. Applicants who would like to work remotely will also be considered.
