Privacy Policy for Crossie

Last updated: July 2, 2025

1. Introduction
Crossie lets you attach and read comments on any web page URL via an injected iframe.
Your privacy matters—we only collect what's strictly necessary to make that work.

2. Data We Collect
- **Active Tab URL** (runtime only): used to fetch/store comment threads for the current page.
- **Comments you post**: text, timestamps, user ID (if you sign in).

3. How We Use Your Data
- Load the correct comment thread when you open a page.
- Save drafts locally so you don't lose typed replies.
- Send/receive comments via our backend (e.g. Supabase).

4. What We Don't Do
- We do **not** track or store your browsing history beyond the URLs you explicitly choose to leave comments on. A URL you visit, but do not comment on, is not stored in our database.
- We do **not** collect PII (unless you explicitly create an account), financial info, health data, location, or keystrokes.
- We do **not** scrape or read page content outside our iframe.

5. Third-Party Services
- **Supabase** for comment storage and authentication. We never ship remote code from them at runtime—all code is bundled at build time; only data calls go over HTTPS.
- (Future) **Stripe** for payments: payment info goes directly to Stripe, we store no card data.

6. Data Retention & Security
- Comments live in our database until you delete them.
- Drafts and preferences cached via `chrome.storage` and encrypted at rest by Chrome.
- We maintain HTTPS everywhere and follow standard best practices.

7. Changes to This Policy
We'll post a revised date here and notify users in the extension if we make material changes.

8. Contact
Email us at hashemalomarr@gmail.com with any questions or data requests.
