

Requirements Validation

Goal: Evaluate the quality of a product backlog and provide constructive feedback.

Team 8 reviewing the work of Team 7

Team X reviews the work of Team Y and provides feedback.
Team Y incorporates the feedback and produces a new version of the product backlog.

Give access to the Product Backlog to the other team

Criteria to evaluate product backlog quality:

- Format
- Confusion
- Consistency
- Completeness
- Amalgamation
- Size
- Priority
- Type
- Etc.
- Check for the definition in the IEEE document in Classes

Methodologies:

- **Step1:** Read the product backlog
- **Step2:** Put comments on ways to improve the Product Backlog directly in the document.
- **Step3:** Draw the web app UI as you perceive it from the US. [Optional Step 2: You could draw your idea of the proposed app and compare it with the app described by the team.]

Draw the UI here

--

- **Step4:** Complete the provided table with the traffic light evaluation mechanism.

	Red (poor) /Orange (average) /Green (good)	Comments
How many US are there total?	25	
How many functional US are there?	21	
How many non-functional US are there?	4	It would be good to have a few more non-functional user stories, instead of mostly functional
List of the users of the app	Teachers and student's guardians	I think it's a good idea for not only the teachers to track the students progress or lack thereof, but also the guardians of said students.
Are the US about the WHAT? (Not the HOW)	Yes	
Are the US following the correct format for US? (As ... I should be able to ... so that ...)	Mostly yes	Some user stories say "I want" or "I must be able to" instead of "I should", those were also found in the template so it may be okay but just in case I would just change them all to "I should be able to".
Are Functional and Non Functional US used well?		Could use some more varied non-functional user stories, since non-functional has a lot of different aspects to it.
Is the Size of US present?	Yes	
Is the Priority of US present?	Yes	

Step6: What is your overall feedback for the team?
