

Our Chinese Numbers are actually extended shortcodes rather than being Mobile Numbers. We make a translation to a Mobile Number for ease of submitting the SMS.

To send to a subscriber FROM your Chinese Virtual Number, you can set the Virtual Number in the format **8612936060xx** in the "FROM" field (aka as Sender ID). The end user will receive the message FROM the shortcode number **1069002936060xx**

For an end user to send an SMS TO your Virtual Number, and please note they can only be reached locally within China, they need to send an SMS To the shortcode number ie **1069002936060xx**. Provider will pass the message back to you as the Virtual Number, ie, **8612936060xx**

We have tested and determined that the end user only pays the normal SMS rate when sending to the shortcode. If the user has a bundle deal including some free SMS it is unlikely though that messages to the shortcode number will be included in the bundle.
