FileFillet Wallpaper Research Report
2/22/2023

OVERVIEW:

Because File Fillet has ever present on-screen UI elements, I found it important to do research into the most common wallpapers to inform the aesthetics we'll be creating. This will ensure our designs don't get lost in the background of the user's desktop. Secondary research was employed in an effort to find data on the most common wallpaper colors users have.

RESULTS:

There was little to no research available as far as most common desktop/background colors. To remedy this, I decided to compile all default wallpapers of MacOS versions. Once compiled, I then created tri-tone color palettes for each. This was incredibly helpful considering that as of now File Fillet is only available to Mac users. These will inform our design decisions going forward, and help us make educated, user-forward decisions. Here are said color palettes:

10.0 Cheetah & 10.1 Puma

10.9 Mavericks

10.2 Jaguar

10.10 Yosemite

10.3 Panther

10.11 El Capitan

10.4 Tiger

10.12 Sierra

10.5 Leopard

10.13 High Sierra

10.5 Leopard Server

10.14 Mojave

10.6 Snow Leopard

10.15 Catalina

10.7 Lion

macOS Big Sur

10.8 Mountain Lion

macOS Monterey

macOS Ventura
