Master Character Creation Prompt

COPY AND PASTE THIS PROMPT:

I want you to act as an expert AI character designer and visual-development artist.

Help me create a highly consistent AI character that I can use repeatedly across images, videos, social media content, advertisements, podcasts, storytelling and other creative projects.

Here are my character details:

- Character name: [NAME]
- Gender: [GENDER]
- Age: [AGE]
- Nationality/ethnicity: [NATIONALITY/ETHNICITY]
- Skin tone: [SKIN TONE]
- Eye color: [EYE COLOR]
- Hair color: [HAIR COLOR]
- Hair style: [HAIR STYLE]
- Face shape: [FACE SHAPE]
- Facial features: [FACIAL FEATURES]
- Body type/build: [BODY TYPE]
- Height/build impression: [DESCRIPTION]
- Clothing style: [CLOTHING STYLE]
- Personality: [PERSONALITY]
- Profession/role: [PROFESSION]
- Any distinctive features: [DISTINCTIVE FEATURES]

Based on these details, create a highly detailed MASTER CHARACTER PROMPT.

The prompt should describe the character's facial identity, skin, eyes, hair, body proportions, facial structure, distinctive features, clothing style and overall personality.

Make the character look realistic, natural and believable unless I specifically request another visual style.

Prioritize facial consistency and recognizable identity. The character must look like the same person every time the prompt is used.

Also include instructions for:

- realistic skin texture
- realistic hair
- natural facial proportions
- realistic eyes
- consistent facial structure
- consistent body proportions
- natural expressions
- professional cinematic lighting
- high-quality photography
- appropriate camera/lens details

Do NOT unnecessarily change the character's physical appearance.

After creating the MASTER CHARACTER PROMPT, create a second prompt called:

CHARACTER REFERENCE SHEET PROMPT

This should generate a reference sheet showing the same character from multiple angles and with multiple facial expressions.

Include:

- front view
- left profile
- right profile
- three-quarter view
- back view
- neutral expression
- happy expression
- sad expression
- angry expression
- surprised expression
- thoughtful expression
- laughing expression
- worried expression

Keep the character's face, hairstyle, body proportions and clothing consistent across every view.

The final result should function as a visual identity reference that can be reused for future AI image and video generation.

Character Voice Prompt

COPY AND PASTE THIS PROMPT:

I want you to act as an expert voice director and AI voice designer.

Create a detailed, consistent voice identity for my AI character.

Character information:

- Character name: [NAME]
- Age: [AGE]
- Gender: [GENDER]
- Nationality/ethnicity: [NATIONALITY]
- Personality: [PERSONALITY]
- Profession/role: [PROFESSION]
- Content niche: [NICHE]
- Audience: [AUDIENCE]

Create a detailed MASTER VOICE PROFILE that I can use to find or generate the same AI voice consistently across all my videos.

Define the following:

1. Gender
2. Perceived age
3. Accent
4. Pitch
5. Vocal texture
6. Vocal warmth
7. Speaking speed
8. Energy level
9. Emotional range
10. Pronunciation style
11. Sentence rhythm
12. Pausing style
13. Breathing style
14. Laughing style
15. Conversational style
16. Overall personality of the voice

Then create a detailed AI VOICE GENERATION PROMPT.

The voice should sound like a real human being rather than an AI voice.

Include instructions for:

- natural pauses
- realistic breathing
- natural emphasis
- conversational rhythm
- emotional variation
- realistic pronunciation
- subtle imperfections
- appropriate speaking speed
- consistent vocal identity

The voice must remain consistent across different scripts and emotional situations.

Avoid:

- robotic delivery
- exaggerated acting
- news-anchor delivery
- commercial advertising voice
- excessive enthusiasm
- unnatural pauses
- exaggerated accent
- overly dramatic delivery

Finally, create a short **VOICE CONSISTENCY LOCK** that I can paste into future prompts whenever I want the AI to maintain exactly the same voice and personality.

Make the voice appropriate for the character's age, personality, nationality and content niche.

PODCAST FRAMING PROMPT:

A vertical 9:16 medium shot, eye-level cinematic podcast interview setup featuring the character from the reference image. The character is seated in a modern black leather studio chair, body angled slightly to the left with legs crossed and hands resting calmly in the lap, gazing off-camera to the left in an attentive, conversational pose.

In the foreground on the left, a professional black studio microphone on a boom arm is angled toward the mouth.

The background features dark vertical wood slat acoustic panels backlit by warm horizontal LED strip lighting, complemented by a soft glowing Edison bulb floor lamp on the far right.

Cinematic 85mm portrait lens, shallow depth of field with a softly blurred background, rich studio key lighting, subtle rim lighting, and warm moody tones. Photorealistic, 8k resolution.
