Semester 1				Semester 2			
<a href="#">Topic 1: Solving Equations and Inequalities</a>	<a href="#">Topic 2: Linear Equations</a>	<a href="#">Topic 3: Linear Functions</a>	<a href="#">Topic 4: Systems of Equations</a>	<a href="#">Topic 6: Exponentials and Exponential Functions</a>	<a href="#">Topic 7: Polynomials and Factoring</a>	<a href="#">Topic 8: Quadratic Functions</a>	<a href="#">Topic 11: Statistics</a>
Extend understanding of writing and solving equations and inequalities to include equations and inequalities that require multiple steps to solve, as well as those that have variables on both sides of the equation or inequality.	Analyze descriptions of lines and write their linear in different forms from real-world and mathematical contexts.	Explore different methods to write and graph and apply analytic methods to tabular and graphic data sets that have linear relationships.	Explore and use varying methods to solve systems of linear equations and inequalities and identify when each solution method is most useful.	Identify, write, graph, and transform exponential functions and use exponential functions to model real-world situations and make predictions.	Identify the parts and factors of polynomials, factor trinomials, and add, subtract, and multiply polynomials.	Extend students' previous understanding of functions to include quadratic functions: graphing, modeling real-world situations, and comparing them to linear and exponential functions.	Understand measures of center and spread including how standard deviation can be used to compare a specific value to other values. Understand how to find joint, marginal and relative frequencies. Explore methods to interpret data displays and create.

Algebra 1

[Fall Interim Assessment](#) (Sept. 22 - Oct. 8)

[Spring Interim Assessment](#) (Feb. 23 - March 11)
