So what is NLP?
NLP stands for Neuro-Linguistic Programming. Neuro refers to your neurology; Linguistic refers to language; programming refers to how that neural language functions.
In other words, learning NLP is like learning the language of your own mind!

NLP is the study of excellent communication–both with yourself, and with others. It was developed by modeling excellent communicators and therapists who got results with their clients.
NLP is a set of tools and techniques, but it is so much more than that.
It is an attitude and a methodology of knowing how to achieve your goals and get results

Hypnosis coures

Hypnosis is a human condition involving focused attention, reduced peripheral awareness, and an enhanced capacity to respond to suggestiom.

There are competing theories explaining hypnosis and related phenomena. Altered state theories see hypnosis as an altered state of mind or trance, marked by a level of awareness different from the ordinary state of consciousness.
In contrast, nonstate theories see hypnosis as, variously, a type of placebo effect, a redefinition of an interaction with a therapist or form of imaginative role enactment.

During hypnosis, a person is said to have heightened focus and concentration. Hypnotized subjects are said to show an increased response to suggestions. Hypnosis usually begins with a hypnotic induction involving a series of preliminary instructions and suggestion.
The use of hypnotism for therapeutic purposes is referred to as "hypnotherapy", while its use as a form of entertainment for an audience is known as "stage hypnosis".
Stage hypnosis is often performed by mentalists practicing the art form of mentalism.
