Q)Swapping of two numbers without using a temporary variable

```
a=int(input("Enter the value of first variable:"))
b=int(input("Enter the value of second variable:"))
a=a+b
b=a-b
a=a-b
print("a is :",a,"b is:",b)
```

OUTPUT:

```
Enter the value of first variable:45
Enter the value of second variable:96
a is : 96 b is: 45
```
