Deskripsi Singkat Mata Kuliah (Short Course Description)	Mata kuliah ini membahas potensi limbah sebagai pencemar lingkungan serta pendekatan ilmiah dalam pencegahan dan pengelolaan pencemaran yang berkaitan dengan limbah. Topik yang dikaji meliputi konsep dasar pengelolaan limbah, pengolahan limbah secara aerob dan anaerob, pemanfaatan limbah melalui proses pengomposan, produksi biogas dan pendekatan biorefinery, serta pengolahan air limbah secara fisik, kimia, dan biologis, termasuk perkembangan terkini dalam ilmu pengetahuan dan teknologi pengelolaan limbah. Perkuliahan dilaksanakan melalui pembelajaran berbasis proyek dan berorientasi pada pemecahan masalah, dengan penekanan pada telaah kritis publikasi ilmiah terbaru (≥ 2020) di bidang pengelolaan limbah. Mahasiswa menganalisis permasalahan lingkungan yang berkaitan dengan timbulan dan pengolahan limbah, mengevaluasi kinerja teknologi berdasarkan data yang dilaporkan dalam literatur ilmiah, serta merumuskan solusi yang berbasis kajian ilmiah. Mata kuliah ini berkontribusi terhadap pencapaian Tujuan Pembangunan Berkelanjutan (SDGs), khususnya SDG 6 (Air Bersih dan Sanitasi Layak), SDG 12 (Konsumsi dan Produksi yang Bertanggung Jawab), serta SDG 13 (Penanganan Perubahan Iklim). Total workload mahasiswa dalam mata kuliah ini setara dengan 3,7 ECTS. <i>(This course explores the potential of waste as an environmental pollutant and scientific approaches to preventing and managing waste-related pollution. Topics include the basic concepts of waste management, aerobic and anaerobic waste treatment, waste valorization through composting, biogas production, and biorefinery approaches, as well as physical, chemical, and biological wastewater treatment, including recent developments in waste management science and technology.</i> <i>The course uses a project-based and problem-solving approach, with an emphasis on the critical review of recent scientific publications (≥ 2020) in waste management. Students analyze environmental issues related to waste generation and treatment, evaluate technology performance based on data reported in the scientific literature, and develop scientifically informed solutions. The course contributes to the achievement of the Sustainable Development Goals (SDGs), particularly SDG 6 (Clean Water and Sanitation), SDG 12 (Responsible Consumption and Production), and SDG 13 (Climate Action). The total student workload for this course is equivalent to 3.7 ECTS.)</i>
