

Adding Advance Metadata to a Get it?

Advanced Metadata

The additional meta-tagging section provides advanced metadata options for selecting a custom publisher, adjusting sharing and permission rights, copyright date, and allowing for co-editing (specific to LLP developers).

In advanced metadata:

- Set a publisher using the dropdown. The Get it? logo will always display, overriding a custom logo for a publisher, but this metadata can be used to refine a search for Get it? by publisher.
- A minimum user type can be set once a Get it? is shared. To do so, use the dropdown.
- Copyright will default to the current year and is adjustable.
- The learning resource type of assessment is set by default and cannot be changed. This tag causes the Get it? to display on the “Assessment” tab in search results (visible to Teachers only) as well as the Get it? tab in search results. Students do have access to the Get it? tab. Sharing and permissions will control which Get it?s students can see.

A screenshot of the 'Additional Meta-Tagging' form. The form is titled 'Additional Meta-Tagging' with a blue icon. It contains several fields: 'Publisher:' with a dropdown menu showing 'Inferno School District'; 'Sharing:' with two checkboxes, 'School' (checked) and 'District' (checked); 'Minimum User Type:' with a dropdown menu showing 'All User Types'; 'Co-Editor Group:' with a dropdown menu showing 'Social Studies Department Developers' and a 'View Users' link; 'Restrict Viewing to Group:' with a dropdown menu showing 'Social Studies Department Developers' and a 'View Users' link; 'Copyright:' with a dropdown menu showing '2020'; and 'Learning Resource Type:' with a checked checkbox for 'Assessment'. At the bottom, there are two buttons: 'Save' and 'Save & Add Standard Correlations'.

Additional meta-tagging options. This view is for a System or Curriculum Administrator or Department Developer. Share to district, the 'Co-Editor' and 'Restrict Viewing' options do not show to teachers.
