

1. What is the central focus of corpus linguistics?
 - A. Detailed interpretation of single literary texts
 - B. Systematic analysis of patterns across texts
 - C. Historical reconstruction of printed materials
 - D. Exclusive study of spoken discourse
2. What is the main purpose of sentiment analysis?
 - A. To identify syntactic patterns in sentences
 - B. To determine the emotional polarity of a text
 - C. To calculate lexical density in documents
 - D. To recognize the language of a text
3. In Digital Humanities, Artificial Intelligence refers to:
 - A. Systems capable of simulating reasoning and learning
 - B. Tools designed for long-term storage of digital archives
 - C. Methods for categorizing linguistic corpora manually
 - D. Techniques focused on frequency-based text analysis
4. Which statement best characterizes algorithmic approaches?
 - A. They generate text using probabilistic inference
 - B. They operate according to explicitly defined procedures
 - C. They depend on neural architectures trained on data
 - D. They derive meaning from contextual embeddings
5. How do AI-based methods fundamentally differ from algorithmic ones?
 - A. They rely on fixed grammatical frameworks
 - B. They avoid statistical modeling techniques
 - C. They infer patterns through data-driven learning
 - D. They function only within curated databases
6. What is meant by AI hallucination?
 - A. Errors occurring during automatic speech recognition
 - B. Variability in probabilistic output generation
 - C. Production of plausible but incorrect information
 - D. Failure to recognize syntactic anomalies
7. How has corpus linguistics influenced modern lexicography?
 - A. By enabling faster digital formatting of entries
 - B. By prioritizing abstract definitions over usage
 - C. By tolerating frequent spelling variation as standard
 - D. By grounding entries in observed language use
8. What is the main purpose of a concordance line?
 - A. To retrieve semantically related vocabulary items
 - B. To observe how a linguistic item functions in context
 - C. To locate dictionary-style definitions of words
 - D. To trace the historical origin of lexical items
9. What does \b signify in RegEx syntax?
 - A. A deletion marker
 - B. The start of a document
 - C. A boundary between words
 - D. A capitalized character
10. In the context of Padlet, what does “co-construction of knowledge” involve?
 - A. A single participant producing the main content
 - B. Learners predicting and evaluating peer responses
 - C. Participants collectively developing ideas in interaction
 - D. Users focusing on correcting linguistic errors
