CommunityHero

November 12th 2017

The Problem

Community building is a problem in itself in our community. People from diverse backgrounds but with similar interests exist in our community but they are not connected. There are various social network groups but they fail to address the issue of keeping a community **organized, active and authentic.**

The Solution

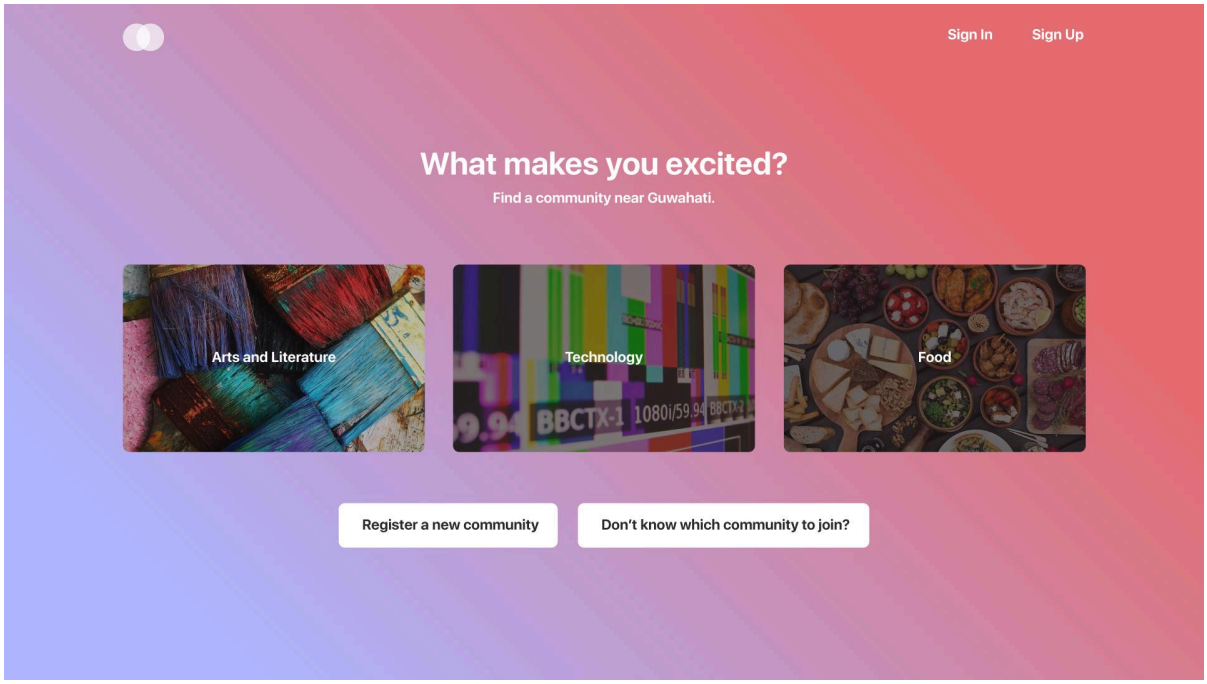

A web based community management platform where people can discover verified communities around them even create a verified community if it does not exist. The idea is to connect, fund and grow local communities and connect them to other communities.

Impact

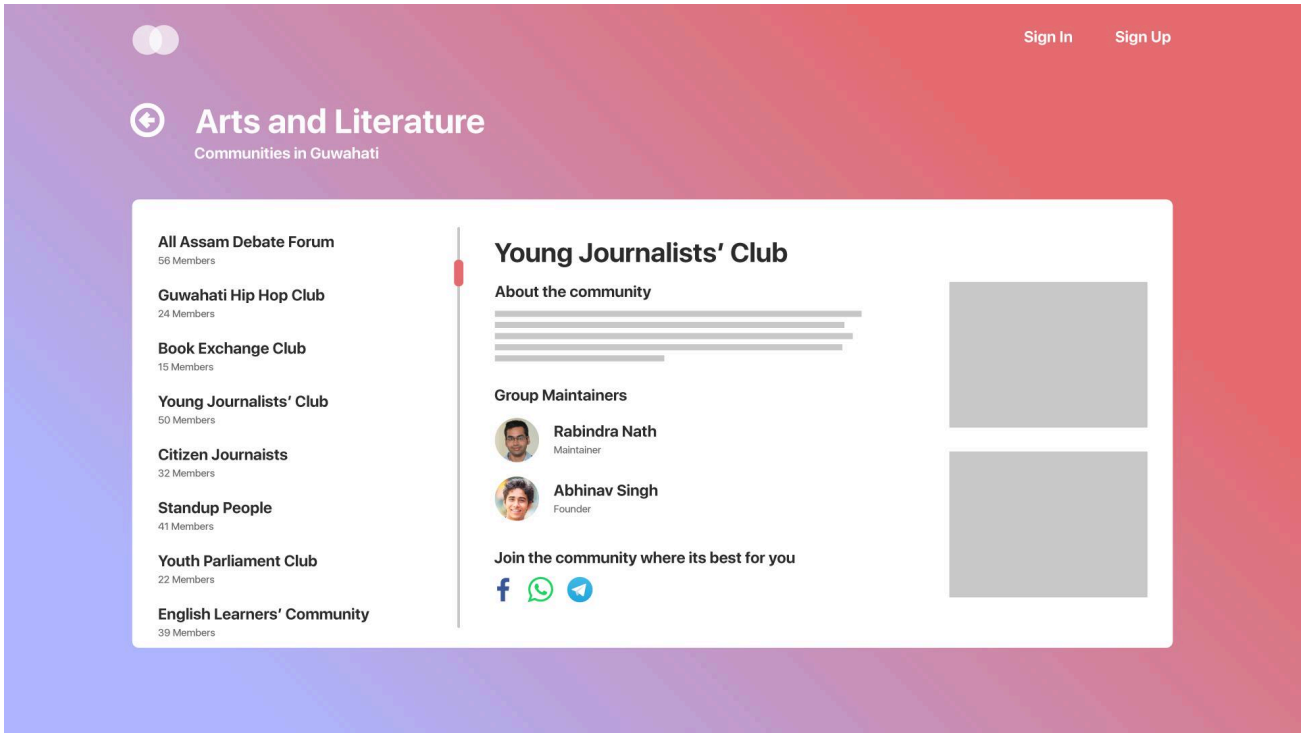

Increased engagement among students and other members of the community. Community members will be able to learn from each other and organize events powered by **CommunityHero.** This will result in:

- A healthy and active mind for the community
- Connect with like-minded positive people
- Skill development and employment
- Socialise with and respect other cultures and their views
