Jae Jin Pak 00:03

My name is Jae Jin Pak. I am an Asian American immigrant with a couple of disabilities. I have low vision, high blood pressure, and have lived with a seizure disorder. I would like to say to those of you who are concerned or how hesitancy about the COVID-19 vaccine, I understand it. And because of all the information and misinformation and confusion in mass media and reporting, I do understand it. So I ask you and encourage you to please do your own research and talk to your doctor. Look at the information on credible websites like your local public health department, like the CDC, and other credible folks who understand healthcare and understand biology and understand the virus and vaccinations. Please do not fall into the trap of believing the posts on just social media alone. Look and talk to doctors, nurses and other health care providers. And you will find the vaccine is safe. It is low risk. And I with that I also just encourage you to please get vaccinated. It's free. Depending on where you are, you can get it easily possibly even at home. By taking the vaccine, you're helping yourself as well as protecting your family, friends and the community around you.
