

Intro to Computing at Wormholt Primary School

Wormholt Park Primary School. It's a two form entry school situated in White City in West London. It's in a very diverse area where a lot of the children here don't get access to a lot of the range of experiences that other schools would.

And so as a school and a computing lead at the school, it's been my mission over the last five years to try and broaden the opportunities for them at school within the grounds of the school.

So one way of doing that that we've been working a lot, is how we take the computing curriculum, and we add in as much physical computing as possible, trying to apply the ideas of computational thinking to as many aspects as possible, using as much hardware as possible.

And that has been done. So in one way, through the PicoH Project, which LGfL had been involved with, I've been working with Wormholt for a number of years on their journey through the new computing curriculum. And it's been really interesting seeing how they've started working with the BeBots and then moving into Dash and Dot, working with Crumble Robotics. And then, of course, moving up into the PicoH Project, and the resources that we've developed in school will be available to all.
