

Gmail Customization ~ Themes

There are many ways in which to customize your Gmail account. The following isn't necessary in order to use Gmail, but may make the experience and use of Gmail easier for some.

To make most of your customization changes, open your email settings in the upper right corner once you've reached your Gmail Inbox. Select Themes from the dropdown list.

Themes

While themes aren't necessary in any way, they do provide a way to customize your Gmail experience and help make it unique and to help be able to tell one account from another.

- Simply click on an option you would prefer to use from the list.
- Options will include categories such as; Color Themes, HD Themes, Custom Themes, and Classic Themes. Custom Themes allow a user to use their own image for their background as well.
- Your Gmail background will change automatically without any need to change anything. You can try different themes until you've reached one you prefer.
- Once done, simply click on your **Inbox** on the left column of the page.
