

## Unit 2 Scenic Design Diorama Project

You and a partner will design and build a small scenic model (diorama) for a theater scene. This project will help you practice how scenic designers plan, design, and build sets safely and creatively.

You will move through the same steps real scenic designers use: planning, designing, and building.

### Scene Choices

Choose ONE of the following scenes to design:

- A Waiting Room in a public building
- A Living Room in a family home
- A Park Bench at night
- A Classroom after school

All groups will design for one of these scenes, but no two designs should look the same.

### Project Steps

1. Create a ground plan (top-down view of the stage)
2. Make a materials list
3. Paint the inside of your box (floor and walls)
4. Build and place your scenic pieces
5. Reflect on your design choices and safety
