

[CATCH](#) is changing the dating game, by putting the dating back into dating apps. We're making it easier and faster to meet someone in person for a truly human connection. After an immensely successful pilot we've secured funding to grow our team, our tech and our user base.

We're looking for a developer to help build out our MVP, creating compelling user experiences in our mobile app and developing nuanced and scalable matching algorithms on the back end.

We're looking for someone who...

- is great to work with (we're looking for curiosity, pragmatism, and clear communication - excellent written and spoken English is a must)
- is a solid coder (our tech stack is a Ruby on Rails back end and a React Native mobile app, and you'll be working on both so prior exposure to either is a plus, but we're more interested in talent than specific experience)
- is smart and gets things done

What we can offer:

- You'll be working remotely. If you're based in the UK we'll meet up once a week at a mutually convenient location, otherwise we'll do regular video calls
- You'll be solving lots of varied technical problems that will probably push you beyond your comfort zone, but you'll be supported all the way by our CTO
- We're setting a sustainable pace from the start. We're not into pulling all-nighters, giving up all our evenings and weekends or anything that will cause anyone to burn out
- We'll pay you £3k/month for 2 months while we get to know you, and if it's a good fit we can offer a £35k salary.

About us:

We're a small (4 people right now), experienced team who've worked together before. George, our CEO, is a serial entrepreneur who sold his last company to the Telegraph, and Patrick, our CTO, has been building tech for startups since 2008.

We initially explored the CATCH concept with a trial, and decided to run with it on the strength of a hugely positive pilot, which garnered great feedback and showed very promising organic growth right from the outset.

If you're interested in joining us, send us an email with a CV to patrick@rambunctious.co.
