Abstract

Abstract contains a brief description of the problem and research objectives, the method used and the results of the study. Abstract writing pressure especially on the results of the study. Abstract is written in English. Abstract typing is written with a single space with narrower margins than the right and left margins of the main text. Abstract is written with Times New Roman 12 font, space 1, justify.

Keywords: Keywords are listed to describe the domain of the problem. Keywords can be a single word or combination of words.

Introduction

Introduction

Introduction mainly contains (1) research problems, (2) insight and problem solving plans, (3) research objectives formulation, (4) summary theoretical studies related to the problem under study. The introduction length is around 2-3 pages and typed using Times New Roman font 12, regular, spaced 1.5, spacing before 0 pt, after 0 pt, justify.

Method

Basically this section explains how this research was conducted. The main materials of the method are; (1) research design, (2) population and sample (research target), (3) data collection techniques, (4) and data analysis techniques. For qualitative research needs to be added to the presence of researchers, research subjects, informants who helped along with ways to explore research data, location and duration of research and a description of checking the validity of research results. Avoid writing organizers into children's sub-sections in this section. The method is

typed using Times New Roman 12 font, regular, 1.5 space, spacing before 0 pt, after 0 pt, justify.

Discussion

This section is the main part of the research article. Is the longest part of an article. The process of data analysis such as statistical calculations and the process of testing hypotheses do not need to be presented, only the results of the analysis and the results of hypothesis testing only need to be reported. Tables and graphs can be used to clarify the presentation of verbal research results. Tables and graphs must be commented or discussed.

For qualitative research the results section contains detailed sections in the form of sub-topics which are directly related to the focus of the research and categories. Sub topics are written without using letter or number numbering.

The discussion in the article aims to; (1) answer the problem statement, (2) show how the findings were obtained, (3) interpret the findings, (4) relate the findings of the research to the established knowledge structure, and (5) bring forth new theories or modification of existing theories.

In answering the problem formulation and research questions, the results of the study must be concluded explicitly. The interpretation of the findings is done by using existing logic and theories. Findings in the form of reality in the field are associated with the results of previous research or with existing theories. For this purpose there must be a goal. In generating new theories, old theories can be confirmed or rejected, some may need to modify the theory from the old theory.

In an article, sometimes it is unavoidable to organize the writing of research results into the child sub-title. The following is how to write the format of the organization, which shows how to write special things that cannot be separated from an article. Discussion was typed using Times New Roman 12 fonts, regular, 1.5 spaces, spacing before 0 pt, after 0 pt, justify. Furthermore, other sub-topics also use the same writing rules.

Acronym

Acronyms need to be given an extension when written for the first time in this article. for example, KPK (Komisi Pemberantasan Korupsi) is an ad hoc institution in Indonesia that is specifically dealing with corruption. Don't use abbreviations or acronyms on article titles unless they cannot be avoided.

Unit

Unit writing refers to The International System of Units (SI). For example, length (m), mass (kg), time (s), electric current (A), temperature (K), number of substances (moles) and light intensity (cd).

Equation

Write the equation in the Times New Roman font or font symbol. If there are several equations, number the equation. Equation numbers must be sequential and put on the rightmost part, namely (1), (2) and so on. Use italic fonts for variables, bold letters for vectors.

Pictures and Tables

Place the table label above the table, while the image label at the bottom. Write specific tables specifically, for example Table 1, when referring to a table. Examples of writing tables and captions are as follows;

Tabel 1. Format Table

Head of Tables	Head of Table Column	
	Sub- Head of Column	Sub- Head of Column

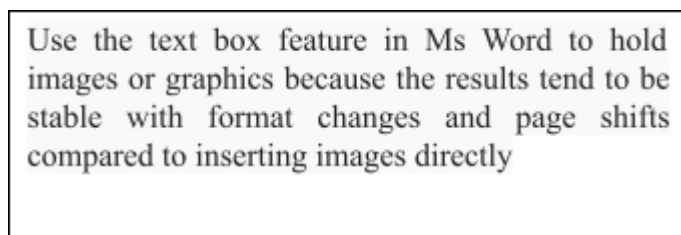

Figure 1. Example Figure Description

Quotes and References

The bibliography must be complete and in accordance with the references presented in the body of the article. The sources written in the Bibliography are actually referred to in the body of the article. Otherwise all references mentioned in the article must be included in the Bibliography. To show the quality of scientific articles listed in the Bibliography must be quite a lot. The bibliography is arranged alphabetically and how to write it using APA Style.

The presentation of other people's ideas in the article is done indirectly. The ideas cited are not written like the original text but a summary or conclusion is made. For example, (Shin, 2020) states that in the late 1980s Psychologist Stanley Milgram conducted an experiment to find answers to something known as the small-world problem.

Reference is the mention of the source of ideas written in the text as (1) acknowledgment to the owner of the idea that the author has borrowed not plagiarism and (2) notification to the reader who and where the idea was taken. The reference includes the name of the author whose opinion was quoted, the year the source of the information was written and / without the page number where the information was referred / taken. The name of the author used in the reference is only the last name. References can be written in the middle of the sentence or at the end of the quotation sentence. Reference is written and separated from quoted sentences with closed parenthesis and closed parenthesis. The reference written in the middle of the sentence is separated by the word that precedes and the word that follows it with distance. The references written at the end of the sentence are separated from the last words of the sentence of quotation with a distance, but not separated by periods. The author's name is written without a distance after the opening parenthesis and followed by a comma. The year of publication is written after commas and given a distance.

Pages of books or articles after the year of publication are separated by colon without distance and closed with less distance. For example: democracy is a system of government that is run through an election process carried out honestly and openly, where all groups participating in the fight are ready to accept the results as a reality that must be respected and adhered to (Entman, 2007).

If the name of the author has been mentioned in the text, the year of publication of the source of information is written immediately after the name of the author. Or if the author's name is to be mentioned, this reference is written at the end of the text. Example; according to Castels (Castells, 2009), democracy is a system of government that is run through an election process carried out honestly and openly, where all groups participating in the fight are ready to accept the results as a reality that must be respected and obeyed.

The names of the two authors in the same work are joined by the words 'and'. Semicolons (;) are used for two authors or more than two authors with different works. example; democracy is a system of government that is run through an election process carried out honestly and openly, where all groups participating in the fight are ready to accept the results as a reality that must be respected and adhered to (Cacciatore, Scheufele, & Iyengar, 2016). If it involves two authors in two different works, the example of which is written: democracy is a system of government that is run through an election process carried out honestly and openly, where all groups participating in the fight are ready to accept the results as a reality that must be respected and adhered to (Lee, 2000; Scheufele, 1999).

If the author is more than two people, only the name of the first author is written. The rest of the author's name is replaced by 'dkk '(and friends/et al). Posts 'et al 'are separated from the name of the author, which is mentioned by distance, followed by a point and ends with a comma. For example: democracy is a system of government that is run through an election process carried out honestly and openly, where all groups participating in the fight are ready to accept the results as a reality that must be respected and adhered to (Cangara et al., 2011).

Conclusion

Conclusions present a summary of the description of the results and discussion, referring to the research objectives and the contribution or implications of the results of the study. Based on these two things, new ideas are developed which are the essence of the research findings.

Reference

Reference writing and citations must use reference management software (Mendeley) with APA Style. Reference should use sources originating from the journal and at least use 2 citation from IJCS.
