

Updated Moodle Dashboard

The Moodle Dashboard is updated to give you quick access to courses you've been accessing. The course overview also allows for some quick filtering.

Badge Improvements

With this Moodle update, the badges awarded in Moodle will achieve Open Badges 2.0 requirements. Badges can be awarded based on achieving course competencies. And once awarded badges can be exported to Badgr.

Improved Assignment Feedback

When providing feedback in Moodle Assignment activities, instructors will have more options for the media they can include. Instructors will be able to record audio to attach, or embed images in their feedback comments.

Forum Improvements

Instructors and students will be able to star forum discussions, flagging them for easy access if they want to quickly return to a particular conversation. Instructors can also reply privately to students in discussion forums, such as if they want to provide feedback in response to a student's contribution.

Future Courses Appear under My Courses

Instructors should see upcoming courses appear under "My Courses" as soon as they're enrolled. Students will be able to access Future Courses under "My Courses" as soon as the instructor has made the course visible.
