

2B Technologies - 2B Connect App Privacy Policy

The 2B Connect App requires access to the user's location while using the app. Location data is used to create Treks, a feature that geolocates data collected from devices to the point of collection. The data is only saved if the user decides to generate a Trek. The user can only share the data to a destination of their choice through email. 2B Technologies does not collect any location data collected by the app.
