ARTICLE INFO	ABSTRACT
<p><b>Article history:</b> Received xx September 202x Revised xx October 202x Accepted xx December 202x Published xx April 202x</p>	<p>It requires concise, specific, accurate, and factual information to briefly show the reasons for the study, the proposed solution, the method used, the proposed contribution, the research objectives to be achieved, the results and conclusions, and to highlight the difference/benefit it offers compared to a pre-existing method. Do not display procedure steps and citation source. It should contain no more than 250 words. Remember, it will be read first by the reader. This is your article advertising; make it as attractive and easy to understand as possible.</p>
<p><b>Keywords:</b> Maximum Five Word Key Important</p>

### 1. Introduction

Juteru: Journal of Universal Transformation, Education, Research, and Utility, which shall be henceforth called Juteru, is the national journal indexed in the Directory of Open Access Journals (DOAJ), focusing on the exchange of information associated with information system technology applied to industries, government, and universities throughout the world. It is established to publish papers discussing design, development, test, implementation, and/or management of information system technology.

Juteru publishes papers of research with results having contribution or novelty to information system technology field, however, it is unlimited to Data Mining, Data Warehouse, Supply Chain Management, Game, Machine Learning, Pattern Recognition, Information Retrieval, Network Security, Computer Network, Computer Applications, Decision Support System, Business intelligence, Expert System, Electronic Commerce, Government Information, Information Management, Algorithm, Image Processing, Vision Computing, Urban Informatics, Social and Natural Science, Internet of Things, etc. Novelty must be clearly stated, and the research gap must be outlined to clarify what the researcher proposes to address. Moreover, a journal can also be the result of a review, but requires the author to have a doctorate and be skilled in writing articles to be reviewed based on the track record of publication and frequently conducted researches [1].

Each article must comply with the parametric style of the Register and template, as shown in the following categories [1, 2]:

- a. Each page must be suitable for the margins, number pages, header and footer with this template formatting.

- b. Title contains a maximum of 20 words which are plain, informative, illustrating the contents of the research object problems, the used method, and the expected objectives. It must also have two languages, like an abstract.
- c. The name of the author, when single, must be repeated, for example, only a single word, Fulan, to have Fulan Fulan. First name and second name should not be abbreviated without a degree. It means that an article by the author, when filled by other authors, can be detected by an indexing machine, such as Google Scholar.
- d. The contents of the article must use a heading with regular Palatino Linotype 10 font and single-spaced.
- e. Minimal pages are 6 pages or 3,000 words overall.

Each sub-section of the first paragraph does not use an indent, but the following paragraphs use a 1-cm indent. Each foreign term, such as Arab, Local, and Slang, if possible, must be italicized. Please always check foreign words or check through <https://en.oxforddictionaries.com/>. Be sure that the sent article is a product of individual work, not being/has been in the publication process for other publishers. Large Language Models (LLMs), such as ChatGPT, cannot be listed as authors. Each article will be checked for plagiarism using iThenticate or Turnitin, with a maximum tolerance of <15%.

The introduction must contain a general background (briefly), a literature review (state of the art), and the existing methods/solutions, to show the best of previous research and the main limitations of previous research. At least five pieces of literature have supported it to justify the novelty of this paper. The introduction should clearly contain the gap analysis as the basis of the new research question. The main research problems (novelty) can be detailed in this section.

## 2. Materials and Methods

### 2.1. Materials

### 2.2. Methods

#### 2.2.1. Sub Methods

##### 2.2.1.1. Sub Sub Methods

The research stages and analysis must be explained in detail. References must accompany the method used, and any relevant changes must be explained. A literature review article should highlight the procedure and data analysis technique.

The content is associated with previous research conducted by the author. It contains at least 5 references in the Introduction and at least 25 in the entire work. The sources must be an international-language article and published in journals and proceedings associated with your research. They should be up to date, no more than 5 years old as of the date of publication. Journals and proceedings are mainly indexed by Scopus, Clarivate Analytics Web of Science (SCIE & SSCI), PubMed, DOAJ, or by database entries from IEEE, ACM, ProQuest, CABI, Gale, and EBSCO. Please be sure that each of the references cited in the text is also available in the table of references (vice versa). Non-academic sources such as Wikipedia, blogs, or publications are not allowed.

The method is associated with the validity and reliability of the research results collected and reported in the scientific article. They are the reader's instrument (reviewer) to evaluate whether the methods (and materials/tools/models) used have been appropriate to obtain valid results. The reader or other authors also use them in the research scope to evaluate results critically or redo some part or all of the research reported in the scientific articles using similar methods and processes included in the section. It is unnecessary to write what researchers have understood within the specific research scope; however, the general equipment and tools used must be stated. Please provide a chart/stage for each method for both data collection and benchmarking to assess the success of the research.

All tables should be numbered with Arabic numerals. Every table should have a caption. Headings should be placed above tables, left-justified. Only horizontal lines should be used within a table to distinguish the column headings from the body of the table and immediately above and below the table. Tables must be embedded into the text and not supplied separately. Below is an example which the authors may find useful.

Table 1. An example of a table

An example of a column heading	Column A (t)	Column B (t)
And an entry	1	2
And another entry	3	4
And another entry	5	6

If necessary, the illustration should be added, and more details may be included by using figures or tables. Moreover, each figure, table, and equation must be numbered and explained in the article. The format for a Table is shown in Table 1 above, while the format for the Figure is shown in Figure 1. The function/equation/formula represented in Equation 1 must be written using the equation. Furthermore, the tables and equations should not be presented as images to make them editable for the editor when reviewing the article's size and layout. Any table obtained from another source must be remade and cited accordingly. Moreover, the tables and figures should not be placed on a separate page or in a separate column, but embedded in the article's content.

Example of Equation 1,

$$D(x, y) = \sqrt{\sum_{i=1}^n f((xi: yi) - (wi)2)} \tag{1}$$

Where x = data of training, y = data of testing, n = total attributes, f = function of similarity between point x and point y, and w<sub>i</sub> = weight given to attribute i.

Fig. 1. Example of Figure: (a) Ring stain; (b) Corrosive stain, and (c) Yellow stain [3]

### 3. Results and Discussion

The results and discussion should be presented clearly and briefly. The discussion section should present the research results and discuss the findings. Not the repeat result part. The results of data analysis must be reliable in answering research problems. References to the discussion should not repeat the references in the introduction—comparisons to the findings of previous studies supported with citations. The author must write a synthesis that compares their findings with previous studies and includes citations.

Please do not alter the formatting and style layouts set up in this template document. As indicated in the template, papers should be prepared in a single-column format suitable for direct printing on A4 paper (210 x 280 mm). All the required style templates are provided in the file “MS Word Template”. Manuscripts can be supported by tables, graphs, or images that clarify the results presented verbally. The results and discussion are presented clearly and concisely.

### 4. Conclusion

Conclusions written in one paragraph, presented briefly, narrative, non-bulleted, and conceptual. The research impact must be stated.

### Author Contributions

F. Author: Conceptualization, formal analysis, funding acquisition, investigation, methodology, project administration, resources, software, supervision, and writing - review & editing. S. Author: Data curation, investigation, resources, software, validation, visualization, and writing - original draft. T. Author: Investigation, visualization, and writing - review & editing. F. Author: Investigation, project administration, and writing - review & editing. (Author Contribution Form All authors must agree with the relevant terms to indicate their contributions. To know more about the CReDiT Author Statement and definitions of each term mentioned, please visit <https://casrai.org/credit/>.)

### Acknowledgment

[OPTIONAL]. This is used to appreciate the efforts of associates, who are not registered as co-authors, for their assistance and funding for your research/publication. Therefore, a standard note of 'acknowledgment' is usually published in each article.

#### **Declaration of Competing Interest**

We declare that we have no conflict of interest.

#### **References**

(References are international-language articles, made by using IEEE style, and must be at a minimum of 25 sources with 80% from indexed international journals of Scopus, Clarivate Analytics Web of Science (SCIE & SSCI), PubMed, DOAJ or database entries of IEEE, ACM, Proquest, CABI, Gale, EBSCO, and accredited national journals of S1-S2. The remaining may come from indexed international proceedings in Scopus, Clarivate Analytics Web of Science (SCIE & SSCI), PubMed, DOAJ, or database entries in IEEE, ACM, ProQuest, CABI, Gale, EBSCO, Paten, and research results books. In addition, the article must cite at least 3 references from the journals JUTERU, JUTERI, and JUTERA. References must be from the 5 most recent years, and preferably 3 years.
