Accepted: xx xxx xxxx

Published: xx xxx xxxx

Abstract: An abstract must be written in 200-250 words only (1 paragraph). It should include 1 sentence on the relevance of the study to the field; 1-2 sentences about the general purpose and specific objectives; 2-3 sentences about the methodology, which focuses on the research design and participants with the data gathering procedures, research tools, and data analysis; 2-3 sentences on major findings and their implications; and 1-2 sentences on the conclusion, limitation, and recommendation. Do not simply copy-paste what you have below. No citations.

Keywords: Write 3-5 keywords. Arrange alphabetically. Do not use words present in the title.

To cite this article: Alpha, A. X., & Bravo, A. Z. (2026). Title of the article in sentence case: About 10-14 words only. *Educational Digest, Special Issue 2, _-_-*.

Introduction

Encode your text here, or you may copy-paste from your version, but carefully follow this format. The whole article must have **at least 6,000 (at most 7,000 words) from the Title to the References**. The **similarity and AI writing index should be lower than 10%**. Proofread your work before submitting it to the journal. Do not edit headers and footers.

In your Introduction, provide a clear context about the study (What is the study? What are the variables that will be explored?). Afterward, present the rationale (Why is there a need to explore the study? Why is there a need to address the problem? Why do you need to evaluate the existing program, policy, or practice? What's the deal with the development, implementation, or evaluation of an instructional model or educational framework?). Support these with relevant literature and related studies published from 2020 onwards. You may use themes if deemed necessary.

Theme 1

You may use themes if deemed necessary. Either inspired by your literature review, variables you want to explore, or the issue or concern you wish to address.

Theme 2

Having two themes is good. Present the gaps in the literature. Emphasize the dearth of proposed solutions to a problem or exploration of one thing.

Theme 3

You may have at most three themes. This would be better.

Research Questions

Present the general purpose of the study here. Your specific research questions must be presented below:

- (1) One. Use question format.
- (2) Two. There should be at least three specific research questions for a quantitative study (two for qualitative). A research question for an instructional model or educational framework must be indicated in your research questions.

- (3) Three. Add more if needed. Reduce or merge research questions if needed.

Methodology

Ensure that your methodology is understandable to readers. It should also be replicated by other researchers in another study. Delete the text in green highlight when submitting your manuscript.

Research Design and Sample

Discuss the specific research design employed, including why and how it was employed. You can insert your conceptual and theoretical framework here.

Discuss who your participants are and how many took part in the study. Describe the sampling procedures used and why they were used. Explain why these participants were chosen.

Data Collection and Instruments

Thoroughly discuss what you did to gather your data. Discuss how and when you started until you completed the data-gathering process.

Present what tools were used to gather the data. Explain its purpose and content. Discuss the instrument's development (if research-made) or modification (if adapted) with its validity and reliability. A photo/screenshot of the instruments must be attached as an appendix.

Data Analysis

Discuss the statistical tools (with assumption checks for inferential ones) used to analyze your quantitative data. If you did a qualitative study, discuss how you did your data analysis (coding, generating themes, etc.). Mention the software used if applicable.

Ethical Consideration

Declare measures considered. Approved ethical clearance and communication and signed informed consent might be required by the editor/reviewer assigned.

Results and Discussion

Subheading for Research Question (RQ) 1: provide a heading aligned with your RQ, but do not copy-paste your RQ

Present/narrate your data (Table _). Do **not** narrate all that is presented in the table. Highlight what must be presented to answer your research question. Discuss and explain your results. Relate your findings to relevant literature and related studies. Cite your sources. The table comes next. One table per RQ.

Note: If you have qualitative data, use tables to present the transcripts, codes, and themes, if applicable. Please follow the suggested format by the American Psychological Association (<https://apastyle.apa.org/style-grammar-guidelines/tables-figures/sample-tables>).

Instructional Model or Educational Framework [It would be better if this were reflected in your RQ. When submitting your manuscript, delete the text highlighted in green.]

Please ensure that you will highlight the instructional model or educational framework you developed, proposed, implemented, tested, **OR** evaluated. Provide a narration before presenting the visual, figure, or diagram. If AI-generated, please ensure that declarations are made below.

Conclusion and Recommendations

Present your conclusion in **one** paragraph. Do not summarize your results. Please ensure your conclusion addresses your research questions based on the above results. Provide new meanings and implications (theoretical, technical, or practical) that can be derived from your results.

Present your actionable and feasible recommendations in **one** paragraph. This should be aligned with your conclusion. Besides, indicate the current study's limitations with your suggestions for future directions.

Conflict of Interest

The authors declare no conflict of interest. Delete this section for sole authorship.

Acknowledgments/Funding

Acknowledge institutions or individuals who have significantly contributed to the study's success. Do **not** include family members, a special someone, or advisers/panels (if co-authors). Write "The researchers personally funded the study." if **no** funding was received.

Authorship Details Examples are provided below. Indicate the percentage of contribution. You may also refer to the [CRediT author statement](#) by Elsevier. Delete the text in green highlight when submitting your manuscript.

Alpha (__%): Concept and design, data acquisition and analysis, writing the manuscript. Charlie (__%): Data interpretation, supervision, editing the manuscript.

Use of AI Declaration

Please provide details of the AI tools used and why and how they were used in writing the manuscript. Prompts must be indicated.

References

Follow APA 7th style. Ensure that the sources you cited above are listed below, and the references mentioned here must also be cited above. Use hanging indentation. URLs must be provided. Examples are provided below. Delete the text in green highlight when submitting your manuscript.
