

Title of Paper in Title Case Format in Size 18

Author¹, Author², and Author³

Name of author's institution (if different institutions, write down the institution of each author)

Full address of the institution along with mobile number

First author email

Abstract. Concise English abstract: around 80-100 words Abstract written with one space. The abstract contains the title of the study, research objectives, methods, research results, and conclusions. Provide 3-5 keywords that describe the substance of the article. Typed with one space, Time New Roman 12.

Keywords: keywords must be separated by a; not more than 5 keywords; multi-word keywords accepted; not more than 3 words in one keyword; no acronyms in keywords

1. Introduction [Titles of main section in 12-bold][General text - 11]

If there are more than 1 author and their details are different, the details of the second author must be placed below the first one. If the details are common, follow this format: othername1 surname1 and othername2 surname2. Sections may or may not be numbered. Thus, both Introduction and 1. Introduction are equally acceptable. All text must be justified except where the alignment is explicitly mentioned. The default line spacing is 11 units.

2. Method [Titles of main section in 12-bold][General text - 11]

Research methods contain an explanation of the methods used by researchers to produce findings. This section should show the scientific procedure in a coherent manner carried out by the author to produce a conclusion. Methods contain research approaches and methods, data sources/populations and samples, ways of sample selection/determination of data sources, data collection instruments and methods, and data analysis techniques. This section contains a description of procedures and research steps that are typical in accordance with the topic studied. The length of the method section ranges from 10-15% of the total length of the manuscript. The method is written with Book Antiqua 11, space 1.

3. Result [Titles of main section in 12-bold][General text - 11]

The results section of this study contains exposure to the results of data analysis. Present the results of the research according to the objectives / problems studied and the procedures described in the methods section. The results of data analysis presented are in the form of patterns, characteristics, statistical analysis, hypothesis testing, and others according to research characteristics. Include tables, diagrams, images, or citations needed so that the visualization of research results is easy for readers to understand. Method is written with Book Antiqua 11, space 1.

The table is created with only three full horizontal lines. Avoid using "table above", "table below", "table below", but directly point to the table number (Table 1).

4. Discussion [Titles of main section in 12-bold][General text - 11]

Discussion is the most important aspect of the entire research section and should be given the most space. The discussion contains the meaning of the research results that have been described. What does the data analysis that has been generated in the results section mean? This discussion section is the most important part of the article so that the author so that the author is asked to provide a complete and clear discussion.

The discussion should show the novelty and significant findings of the research conducted. The discussion is carried out by (1) interpreting research findings, (2) integrating findings in the structure of science, (3) revealing new findings (new theories or modifications to existing theories), and (4) explaining the implications of findings theoretically and practically.

Use the latest research results from reputable journals to discuss research findings. The length of exposure to research results and discussion is between 50-60% of the total article length. The discussion section is written with Time New Roman 11.

Another thing in scriptwriting that should be looked at.

Procedures for presenting quotations, tables, figures, illustrations, statistics, and bibliography refer to the *Publication Manual of the American Psychological Association* (7th edition) and the *APA Style Guide to Electronic References*.

5. Conclusion [12-bold]

The conclusion section contains research findings and digests of discussion results. Write down densely the substantial findings of the research conducted. Conclusions should be data-backed and not speculative. The conclusions are consistent with the objectives/problems studied.

Provide recommendations for follow-up research results and further research needed. *Common sense* advice does not need to be written down. If advice is needed, be specific.

The conclusion is presented in paragraph form. The conclusion length is between 5-10% of the total manuscript length.

6. References [12]

[Actual references must be in size 10 - references must follow APA style, 7th edition]. Hanging distance is 0.5 inch. Failure to write references in the proper format will delay publication of the paper.

References must be sorted in alphabetical order.

If doi is not available, add another url from which the material was taken. The word doi must start with a lowercase character (i.e., lowercase d).

Everything matters to us (a space, a comma, a full-stop, a bracket, a colon, a semi-colon, a hyphen, etc, etc).
