Website

Reworks V2 is a fast-paced multiplayer stealth tagging game where identity is hidden and every move matters. Enter a competitive arena where players are assigned secret roles and must outplay, outthink, and outmaneuver others to win.

In each match, no one knows who is behind the action. Trust is limited, deception is common, and every second counts. Players must complete objectives, avoid being tagged, and strategically identify opponents before it’s too late.

Key Features:

- Online multiplayer gameplay focused on stealth and strategy

- Anonymous identity system that keeps all players unknown during matches
- Dynamic tagging mechanics that reward speed, awareness, and prediction
- Competitive rounds with increasing intensity and unpredictable outcomes
- Simple controls designed for fast learning but deep mastery

Anonymous Taggers delivers a tense and immersive experience built for players who enjoy competitive mind games and fast reaction gameplay. Every match is different, and every player could be a threat.

Submission build is currently in active development. Multiplayer systems and additional features are being refined for full release.
