

## Engagement: How Does Water Get to Our Homes?

Look under the sink in your house or apartment (or even the sink in your classroom). What do you see? How does the water get to the faucet?

1. Below, draw what you see under the sink
2. How do you think water gets to your home and school? Where does the water come from, and how is it transported to end up in your faucet? Write below what you think the answer is – it's okay if you are wrong!
