

Masonry Products in Chicago

Meta Description (158 characters):

Shop masonry products in Chicago—cement blocks, bricks, mortar mixes, hydraulic and Portland cement, Quikrete, and accessories for professional builders.

[At A&A Equipment and Supply](#), we provide Chicago's contractors, builders, and masonry professionals with the high-quality materials and [commercial-grade products](#) needed to build strong, lasting structures. From bricks and blocks to mortar mixes, cements, and accessories, our masonry products deliver reliability, durability, and performance on every job site.

We proudly serve commercial construction crews, residential contractors, and municipal maintenance teams throughout Chicago with masonry supplies designed for strength and consistency.

Cement Blocks and Brick Cement for Construction Projects

Solid, dependable materials are the foundation of every successful build. Our masonry inventory includes a wide variety of blocks and bricks for both structural and decorative applications.

- **Cement Blocks (8x8x16 | 6x8x16 | Curved Sewer Block)** – Ideal for retaining structures and load-bearing applications, precision-formed for consistent size and easy stacking
- **Brick Cement Individual Units** – Traditional, high-strength bricks typically used for underground-related structures

Each piece is crafted for dimensional accuracy and durability, ensuring clean lines and long-lasting results.

Mortar Mixes for Strong, Lasting Bonds

Quality mortar is essential for the strength and integrity of any masonry project. We are a distributor for both [Quikrete](#) and [Sakrete](#) brands—reliable pre-blended options for convenience and performance:

- **Type M Mortar Mix** – Higher compressive strength used for setting precast bases, adjusting manhole sections, or setting cast-iron frames in streets or utility trenches. Type M Mortar Mix provides long-term structural stability and resistance to lateral pressure.
- **Type N Mortar Mix** – Lower compressive strength vs Type M. Type N Mortar Mix is used for rebuilding catch basin chimneys, brick collars, or light-duty adjustments where flexibility and finish quality matter more than raw strength.

Both mixes deliver consistent results and easy application, helping crews work efficiently and precisely.

Reinforcing Steel (Rebar)

Reinforcing steel (rebar) provides the structural backbone for concrete, ensuring durability and crack resistance under heavy loads. We supply high-quality rebar ideal for foundations, slabs, roads, and infrastructure projects across Chicago.

We sell sizes **#1 through #8 rebar** ($\frac{1}{4}$ " through 1" nominal diameter), available in standard 20' lengths or custom-cut to order.

Product Options:

- **Plain Rebar** – Standard black steel reinforcement ideal for general concrete applications, including footings, slabs, and structural walls
- **Epoxy-Coated Rebar** – Corrosion-resistant coating for use in wet environments, bridge decks, retaining walls, and below-grade utility structures

All rebar meets [ASTM A615](#) and [ASTM A775](#) specifications for strength and coating performance. Whether you're tying a small footing or reinforcing a large precast structure, our rebar delivers consistent quality and reliable performance on every pour.

Masonry Accessories and Tools

We supply the finishing tools and accessories needed to ensure accuracy and professional results:

- **Concrete Sprayers** – Designed for applying form release agents and surface treatments with precision and durability
- **Trowels, Scrapers, and Chisels** – Professional-grade finishing and detail tools for clean edges and smooth results
- **Pull-Crete and Pinch Bars** – Heavy-duty tools for concrete placement and form alignment
- **Mason Line and Masonry Brushes** – Strong, durable line used for leveling and alignment during brick or block laying, and brushes for painting brick and block
- **Tie-wire** – The appropriate tie-wire for rebar tying needs

These tools help maintain straight, level courses and efficient job site workflow.

Concrete and Cement Mix for Masonry

A&A Equipment and Supply also provides a selection of concrete and cement mixes formulated for specific masonry applications:

- **Hydraulic Cement** – Quick-setting and durable, ideal for sealing leaks or patching cracks in concrete and masonry surfaces
- **Portland Cement** – Available in 47lb and 94lb bag mixes, providing a versatile, high-strength base material for custom mortar, grout, and concrete mixes
- **Concrete Mix** – Ranging from fast-setting formulations to 4,000 and 5,000 PSI blends, providing reliable strength and durability for sewer and water construction projects (4,000 PSI for general utility work and 5,000 PSI for heavy-load or structural applications)

Each product is chosen for its proven performance and reliability in Chicago's demanding construction conditions.

Why Chicago Builders Choose A&A Equipment and Supply

Backed by [40+ years of industry expertise](#), A&A Equipment and Supply Co. is Chicagoland's reliable partner for equipment, supplies, and repair solutions. We take pride in offering:

- **Trusted Quality** – Professional-grade masonry materials for reliable results
- **Complete Inventory** – Blocks, bricks, mortar, cement, and accessories all in one place
- **Local Availability** – Serving contractors and crews across Chicago and surrounding suburbs
- **Built for Chicago Projects** – Products engineered to perform in Midwest weather and job site conditions
- **Customer Service** – Great service through real conversations that address your needs, answer your questions, and make sure your order is fully prepared for the work ahead

Supporting Chicago's Construction and Masonry Projects

From residential builds and commercial developments to city maintenance projects, A&A Equipment and Supply provides the masonry products (also check out our [bagged materials](#)) that keep Chicago running strong. Our customers trust our materials for their durability, consistency, and superior performance on every job.
