

Call Notes - 02 December 2021

Present: Tim Hill (ODI), Nick Evans (ODI/imin), Nathan Salter (Playfinder/Bookteq), Debbie Giordano (EveryoneActive), Matthew Davies (Spawtz)

Appendix C6: Entitlement

The point was clarified that the SKOS list of entitlements needs to be centrally hosted. It was agreed that guidance needed to be added regarding how this URL was to be discovered, how impending changes were to be decided and communicated, etc.

Appendix C7: EvidenceRequestAction

It was clarified that a Booking-System-provided online means of resolving the need for evidence was assumed in this construct. NE also added that Brokers may choose to treat one Booking System as authoritative.

The point was made that agreements about how authority was to be treated would need to be made out-of-band. The chair noted that this should be added to non-normative guidance.

Appendix C9: CustomerAccountUpdateAction

The need to add the relevant errors for this action to the Open Booking specification was noted.

Appendix D3: POST

/customer-accounts/me/customer-update-actions

The question of whether partial updates to customer records should be allowed (i.e., the extent to which updates should be atomic) was discussed at length. It was eventually determined that this was really a requirements question: to what extent does the Broker need to be able to make (partial) updates to the Booking System.

It was agreed that communicating the implications of different approaches in this regard would be difficult, and that wireframes or an MCRAActive demo would be helpful here.

Appendix D4: POST

/customer-accounts/me/initialize-actions

The error codes associated with initialisation failures were modified.

Actions

NE to ask Nish regarding a demo of MCRAActive functionality for customer details updating.

NE to update the 'Geoff Capes' examples to an anonymous individual
